## USE OF SPECIFICATION - TERMS, CONDITIONS & NOTICES

The material in this document details an Object Management Group specification in accordance with the terms, conditions and notices set forth below. This document does not represent a commitment to implement any portion of this specification in any company's products. The information contained in this document is subject to change without notice.

## LICENSES

The companies listed above have granted to the Object Management Group, Inc. (OMG) a nonexclusive, royalty-free, paid up, worldwide license to copy and distribute this document and to modify this document and distribute copies of the modified version. Each of the copyright holders listed above has agreed that no person shall be deemed to have infringed the copyright in the included material of any such copyright holder by reason of having used the specification set forth herein or having conformed any computer software to the specification.

Subject to all of the terms and conditions below, the owners of the copyright in this specification hereby grant you a fully-paid up, non-exclusive, nontransferable, perpetual, worldwide license (without the right to sublicense), to use this specification to create and distribute software and special purpose specifications that are based upon this specification, and to use, copy, and distribute this specification as provided under the Copyright Act; provided that: (1) both the copyright notice identified above and this permission notice appear on any copies of this specification; (2) the use of the specifications is for informational purposes and will not be copied or posted on any network computer or broadcast in any media and will not be otherwise resold or transferred for commercial purposes; and (3) no modifications are made to this specification. This limited permission automatically terminates without notice if you breach any of these terms or conditions. Upon termination, you will destroy immediately any copies of the specifications in your possession or control.

## PATENTS

The attention of adopters is directed to the possibility that compliance with or adoption of OMG specifications may require use of an invention covered by patent rights. OMG shall not be responsible for identifying patents for which a license may be required by any OMG specification, or for conducting legal inquiries into the legal validity or scope of those patents that are brought to its attention. OMG specifications are prospective and advisory only. Prospective users are responsible for protecting themselves against liability for infringement of patents.

## GENERAL USE RESTRICTIONS

Any unauthorized use of this specification may violate copyright laws, trademark laws, and communications regulations and statutes. This document contains information which is protected by copyright. All Rights Reserved. No part of this work covered by copyright herein may be reproduced or used in any form or by any means--graphic, electronic, or mechanical, including photocopying, recording, taping, or information storage and retrieval systems--without permission of the copyright owner.

## DISCLAIMER OF WARRANTY

WHILE THIS PUBLICATION IS BELIEVED TO BE ACCURATE, IT IS PROVIDED "AS IS" AND MAY CONTAIN ERRORS OR MISPRINTS. THE OBJECT MANAGEMENT GROUP AND THE COMPANIES LISTED ABOVE MAKE NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS PUBLICATION, INCLUDING BUT NOT LIMITED TO ANY WARRANTY OF TITLE OR

OWNERSHIP, IMPLIED WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE OR USE. IN NO EVENT SHALL THE OBJECT MANAGEMENT GROUP OR ANY OF THE COMPANIES LISTED ABOVE BE LIABLE FOR ERRORS CONTAINED HEREIN OR FOR DIRECT, INDIRECT, INCIDENTAL, SPECIAL, CONSEQUENTIAL, RELIANCE OR COVER DAMAGES, INCLUDING LOSS OF PROFITS, REVENUE, DATA OR USE, INCURRED BY ANY USER OR ANY THIRD PARTY IN CONNECTION WITH THE FURNISHING, PERFORMANCE, OR USE OF THIS MATERIAL, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

The entire risk as to the quality and performance of software developed using this specification is borne by you. This disclaimer of warranty constitutes an essential part of the license granted to you to use this specification.

## RESTRICTED RIGHTS LEGEND

Use, duplication or disclosure by the U.S. Government is subject to the restrictions set forth in subparagraph (c) (1) (ii) of The Rights in Technical Data and Computer Software Clause at DFARS 252.227-7013 or in subparagraph (c)(1) and (2) of the Commercial Computer Software - Restricted Rights clauses at 48 C.F.R. 52.227-19 or as specified in 48 C.F.R. 227-7202-2 of the DoD F.A.R. Supplement and its successors, or as specified in 48 C.F.R. 12.212 of the Federal Acquisition Regulations and its successors, as applicable. The specification copyright owners are as indicated above and may be contacted through the Object Management Group, 9C Medway Road, PMB 274, Milford, MA 01757, U.S.A.

## TRADEMARKS

CORBA<sup>®</sup>, CORBA logos<sup>®</sup>, FIBO<sup>®</sup>, Financial Industry Business Ontology<sup>®</sup>, Financial Instrument Global Identifier<sup>®</sup>, IIOP<sup>®</sup>, IMM<sup>®</sup>, Model Driven Architecture<sup>®</sup>, MDA<sup>®</sup>, Object Management Group<sup>®</sup>, OMG<sup>®</sup>, OMG Logo<sup>®</sup>, SoaML<sup>®</sup>, SOAML<sup>®</sup>, SysML<sup>®</sup>, UAF<sup>®</sup>, Unified Modeling Language<sup>™</sup>, UML<sup>®</sup>, UML Cube Logo<sup>®</sup>, VSIPL<sup>®</sup>, and XMI<sup>®</sup> are registered trademarks of the Object Management Group, Inc.

For a complete list of trademarks, see: [https://www.omg.org/legal/tm\\_list.htm](https://www.omg.org/legal/tm_list.htm). All other products or company names mentioned are used for identification purposes only, and may be trademarks of their respective owners.

## COMPLIANCE

The copyright holders listed above acknowledge that the Object Management Group (acting itself or through its designees) is and shall at all times be the sole entity that may authorize developers, suppliers and sellers of computer software to use certification marks, trademarks or other special designations to indicate compliance with these materials.

Software developed under the terms of this license may claim compliance or conformance with this specification if and only if the software compliance is of a nature fully matching the applicable compliance points as stated in the specification. Software developed only partially matching the applicable compliance points may claim only that the software was based on this specification, but may not claim compliance or conformance with this specification. In the event that testing suites are implemented or approved by Object Management Group, Inc., software developed using this specification may claim compliance or conformance with the specification only if the software satisfactorily completes the testing suites.

## OMG'S ISSUE REPORTING PROCEDURE

All OMG specifications are subject to continuous review and improvement. As part of this process we encourage readers to report any ambiguities, inconsistencies, or inaccuracies they may find by completing the Issue Reporting Form listed on the main web page <https://www.omg.org>, under Documents, Report a Bug/Issue.

# Preface

## OMG

Founded in 1989, the Object Management Group, Inc. (OMG) is an open membership, not-for-profit computer industry standards consortium that produces and maintains computer industry specifications for interoperable, portable, and reusable enterprise applications in distributed, heterogeneous environments. Membership includes Information Technology vendors, end users, government agencies, and academia.

OMG member companies write, adopt, and maintain its specifications following a mature, open process. OMG's specifications implement the Model Driven Architecture<sup>®</sup> (MDA<sup>®</sup>), maximizing ROI through a full-lifecycle approach to enterprise integration that covers multiple operating systems, programming languages, middleware and networking infrastructures, and software development environments. OMG's specifications include: UML<sup>®</sup> (Unified Modeling Language<sup>™</sup>); CORBA<sup>®</sup> (Common Object Request Broker Architecture); CWM<sup>™</sup> (Common Warehouse Metamodel); and industry-specific standards for dozens of vertical markets.

More information on the OMG is available at <https://www.omg.org/>.

## OMG Specifications

As noted, OMG specifications address middleware, modeling, and vertical domain frameworks. All OMG Specifications are available from the OMG website at: <https://www.omg.org/spec>

All of OMG's formal specifications may be downloaded without charge from our website. (Products implementing OMG specifications are available from individual suppliers.) Copies of specifications, available in PostScript and PDF format, may be obtained from the Specifications Catalog cited above or by contacting the Object Management Group, Inc. at:

OMG Headquarters  
9C Medway Road, PMB 274  
Milford, MA 01757  
USA  
Tel: +1-781-444-0404  
Fax: +1-781-444-0320

Email: [pubs@omg.org](mailto:pubs@omg.org)

Certain OMG specifications are also available as ISO standards. Please consult <https://www.iso.org>

## Issues

All OMG specifications are subject to continuous review and improvement. As part of this process we encourage readers to report any ambiguities, inconsistencies, or inaccuracies they may find by completing the Issue Reporting Form listed on the main web page <https://www.omg.org>, under Specifications, Report an Issue.

# 1 Scope

This specification describes a transformation for a semantic translation from SysML v1 [SysMLv1] to SysML v2 [SysMLv2] in a precise way. (In this document, "SysML v1" refers to SysML v1.7, the last version of SysML prior to v2.0, and "SysML v2" refers to SysML v2.0, or whatever version corresponds to the current version of this specification.)

The main intent is to provide the rules on which automated conversions of SysML v1 models to the SysML v2 standard can be developed. In addition, this annex can be considered an educational document that provides useful information for people who would like to compare using SysML v2 and using SysML v1.

More sophisticated applications of this transformation can also be envisaged. For instance, a SysML v1 conformant tool could use this transformation to implement a limited subset of the SysML v2 API that will provide "SysMLv2-like" read-only access to its SysMLv1 models for external applications.

## 2 Conformance

A tool shall demonstrate *conformance* with this specification by meeting all of the following requirements.

1. The tool shall implement the UML4SysML abstract syntax and SysML v1 profile conformant with [SysMLv1]. The tool should, but is not required, to provide the ability to import a SysML v1 model using standard XMI Model Interchange format [XMI].
2. The tool shall implement the SysML v2 abstract syntax conformant with [SysML v2]. The tool should, but is not required, to provide the ability to export a SysML v2 model KerML-standard model interchange project (see [KerML], Clause 10; see also [SysML v2], Clause 2).
3. The tool shall implement a transformation from an abstract syntax representation of an input SysML v1 model to the abstract syntax representation of an output SysML v2, as specified in of this specification.

A tool may claim *partial conformance* with this specification by satisfying the first two requirements above, but only implementing an identified subset of the mappings specified in and . (Note that care must also be taken that certain mappings depend on other mappings, and so cannot reasonably be implemented separately.)

**Note.** A tool that conforms to [SysMLv2] is not required to necessarily implement a transformation conformant with this specification, or it may implement a SysML v1 to v2 transformation that is not claimed to conform with the transformation defined in this specification.

## 4 Terms and Definitions

Various terms and definitions are specified throughout the body of this specification.

## 5 Symbols

No special symbols are defined in this specification.

# 6 Introduction

## 6.1 Mapping Approach

The SysML v1 to v2 transformation is specified by directional mappings between UML metaclasses or stereotypes that are part of the SysML v1 specification [SysMLv1] (referenced below as the "SysML v1 scope") on the one hand, and the set of the metaclasses defined in the KerML [KerML] and SysMLv2 [SysMLv2] specifications (referenced below as "SysML v2") in the other hand. Some library classes are also involved.

Each mapping is a directed relationship that reifies a semantic link between a concept belonging to the SysML v1 scope on the source side and one concept belonging to SysML v2 (or one conforming library element) on the target side. As a set, those mappings constitute a declarative specification of a formal transformation that describes how the information encoded by the SysML v1 concepts can be reliably represented using constructs of SysML v2 metaclass instances.

In this approach, a mapping is represented by a UML class that has a pair of associations. One provides the `from` end that designates the source SysML v1 concept, while the other provides the `to` end that designates the target SysML v2 metaclass.

In addition to those associations, a mapping class provides a set of operations defining how the values of non-derived properties of the target metaclass instance have to be computed based on property values reachable from the source object. The computation algorithm is provided by the body condition of those operations and expressed using OCL code.

Note that the values assigned to the properties of the target object shall be instances of SysML v2 metaclasses, coming themselves from transformations of SysMLv1 objects to SysMLv2 objects. Since the specification is declarative, the order in which the individual transformations shall happen is not imposed. It is up to a conforming implementation to deal with this. Instead, the `getMapped` static operation is provided for referring to the result of a transformation from within an OCL rule. It returns a (possibly undefined) value, that is typed by the target metaclass of the mapping class from which it is invoked.

Each mapping class enables the transformation of any object that has the type specified by the `from` role to an object of the type specified by the `to` role, as long as it is not overloaded by a more specific mapping definition. In other words, assume a mapping is specified for the class `A` (i.e., it has `A` typing its `from` property), then it applies to any instance of a class `B` if `B` is a subclass of `A` and if there is no specialization of that mapping class specified for `B` (i.e., that has `B` typing its `from` property).

It is possible to restrict the applicability of a mapping specification to a specific subset of objects. This is achieved by the `filter` static operation that is evaluated against each candidate object. Only objects of the appropriate type for which this `filter` operation returns `true` shall be translated according to the specifications of that mapping class. The default `filter` operation always returns `true`.

Some mapping classes have one or more qualifiers for their `to` attribute. In such a case, each of those qualifiers reflects the specific property of the source type (i.e. the type of the `from` attribute) that has the same name and the same type. For those specific mappings, it is expected to get one instance of the target class (as specified by the type of the `to` attribute") for each actual combination of value of those properties for a given instance of object of the source type, assuming they pass the applicability filter as described above.

## 6.2 Acknowledgements

The primary authors of this specification document (and also developers of a proof-of-concept implementation of it) are:

- Yves Bernard, Airbus

- Tim Weilkiens, oose

The specification was formally submitted for standardization by the following organizations:

- 88solutions Corporation
- Dassault Systèmes
- GfSE e.V.
- IBM
- INCOSE
- Intercax LLC
- Lockheed Martin Corporation
- MITRE
- Model Driven Solutions, Inc.
- PTC
- Simula Research Laboratory AS
- Thematrix Partners LLC

However, work on the specification was also supported by over 200 people in over 80 organizations that participated in the SysML v2 Submission Team (SST), by contributing use cases, providing critical review and comment, and validating the language design. The following individuals had leadership roles in the SST:

- Manas Bajaj, Intercax LLC (API and services development lead)
- Yves Bernard, Airbus (v1 to v2 transformation co-lead)
- Bjorn Cole, Lockheed Martin Corporation (metamodel development co-lead)
- Sanford Friedenthal, SAF Consulting (SST co-lead, requirements V&V lead)
- Charles Gale, Lockheed Martin Corporation (metamodel development co-lead)
- Karen Ryan, Siemens (metamodel development co-lead)
- Ed Seidewitz, Model Driven Solutions (SST co-lead, pilot implementation lead)
- Tim Weilkiens, oose (v1 to v2 transformation co-lead)

The specification was prepared using CATIA Magic/No Magic modeling tools and the OpenMBEE system for model publication (<http://www.openmbee.org>), supported by the 3DEXPERIENCE platform, with the invaluable support of the following individuals:

- Tyler Anderson, Dassault Systèmes
- Christopher Delp, Jet Propulsion Laboratory
- Jackson Galloway, Dassault Systèmes
- Ivan Gomes, Twingineer
- Doris Lam, Jet Propulsion Laboratory
- Robert Karban, Jet Propulsion Laboratory
- Christopher Klotz, Dassault Systèmes
- John Watson, Lightstreet Consulting

# 7 Mappings

## 7.1 Overview

This Clause is organized in order to match the packages that subdivide the model of the transformation. The `Foundations` package gathers the abstract classes that represent the concepts on top of which the mapping approach is built. The next subclause presents a utility class named `Helper` that provides reusable operations that simplify the OCL statements defining the computation rules of target properties and make them more readable. Libraries play an important role in SysML v2, and a specific one has been created in order to represent semantics equivalent to those of UML/SysML concepts, where needed. It is presented in this subclause as well.

The three next subclauses are dedicated to initializers, factories and generic mappings, respectively. They do not specify mappings, strictly speaking. Instead, they factorize more or less advanced OCL code that will be reused by the actual mapping specifications that are contained in the two last subclauses. The first of them is dedicated to UML metaclass from the UML4SYSML scope, while the second deals with SysML stereotypes more specifically.

## 7.2 Foundations

### 7.2.1 Overview

The concepts defined by KerML/SysML v2 are relatively similar to those of UML/SysML v1, but the ways they are built are different. This makes the specification of the global transformation quite complex. In order to keep it manageable, specific kinds of foundational classes are provided. They represent concepts on which classical "model to model" transformation technologies rely:

- The mappings built on top of the abstract class `Mapping` shall be executed only when they are explicitly called. Each call shall produce a new target element, whatever the source element. It specifies a `from` property typed by the `UML::CommonStructure::Element` metaclass that shall be redefined by any of its subclass for specifying the convenient type of source element. Also it specifies a default (neutral) filter and a set of `getMapped` operations for various purposes: regular mapping result, qualified mapping result and mapping result for a collection of elements.
- The mappings built on top of the abstract class `UniqueMapping`, specified as a specialization of the `Mapping` class, shall produce only one target element for a given source element, whatever the number of time they are called.
- The mappings built on top of the abstract class `MainMapping`, specified as a specialization of the `UniqueMapping` class, shall be systematically executed (i.e. implicitly called) for all the elements that match both their source type and filter. There can be at most one main mapping for a given source type and only one target element shall be produced for a given source element.

The corresponding classes are located in the `Foundations` package.

Sometimes, it is necessary to be able to generate elements in the target model without having to provide an explicit link with a source element. In such a case, a mapping class is not appropriate. Instead the mapping framework provides the concept of a `Factory`.

Last, the concept of an `Initializer` allows the factorization of the specification of properties' default values that can be inherited by mappings and factories, as convenient.

In the model of the transformation that is specified here, all of the abstract classes of this `Foundations` package are subject to direct or indirect subclassing. In other words, this specification is built as a set of interrelated initializers, factories, regular, unique and main mappings, where the initializers' operation factorizes the specification of default values for their target element, wherever possible. Those "default operations" are either used as-is or redefined by mappings or factories that can inherit for a specific initializer, as appropriate.

## 7.2.2 Foundational class specifications

### 7.2.2.1 UniqueMapping

#### Description

The mappings built on top of the abstract class UniqueMapping are a specific kind of Mappings that are intended to produce only one target element for a given source element, whatever the number of time they are called. If a getMapped is called several time with the same source element, the target element returned shall always be the same.

#### General Classes

- Mapping (from Foundations)

### 7.2.2.2 Factory

#### Description

Similarly to the well-known to the homonyms software design pattern, a Factory can be used for specifying the production of a target element without any link with a source element. Factories have in common with mapping classes the operations that specify how the properties of the target element shall be computed and the "to" property that specifies the type of the target element. However factories do not define source element. Instead, they can have parameters. Those parameters, if any, shall be specified by properties with appropriate types and multiplicities. Factories are expected to provide a "create" operation with parameters matching in type and multiplicity the properties that are intended to specify them.

#### General Classes

- Initializer (from Foundations)

### 7.2.2.3 Mapping

#### Description

This is the generic abstract class that provides the basic features of any mapping class mapping. The mappings built on top of the abstract class Mapping are intended to be executed only when explicitly called (e.g. by the rule of another mapping class). It specifies a "from" property typed by the UML::CommonStructure::Element metaclass that shall be redefined by any of its subclass for specifying the convenient type of source element. Also it specifies a default (neutral) filter and a set of getMapped operations for various purposes: regular mapping result, qualified mapping result and mapping result for a collection of elements. Each call to the getMapped operation shall produce a new target element, whatever the source element provided. Instances of Mapping class are represent a link between one source element and the target element produced by the transformation specified by that mapping class.

#### General Classes

- Initializer (from Foundations)

#### Association Ends

- from : Element [1]

#### Operations

- filter (in src : Element) : Boolean [1]  
returns "true" if the element provided as the actual parameter value can have a mapping to an instance of

the type specified by the "to" attribute (i.e. can be used as a value for the "from" attribute)

```
true
```

- `getMapped (in fromVar : Element) : Element [1]`

**postConditions:**

```
self.filter(fromVar) and
self.to.allFeatures()->selectByKind(UML::Property)->reject(isDerived)
->forAll(p | let ops: Operation = self.allFeatures()
  ->selectByKind(UML::Operation)->any(o | o.name = p.name) in
  p = ops()) and
result = self.to
```

- `getMapped (in fromVar : Element, in qual : Element) : Element [1]`

**postConditions:**

```
self.filter(fromVar) and
self.to.allFeatures()->selectByKind(UML::Property)->reject(isDerived)
->forAll(p | let ops: Operation = self.allFeatures()
  ->selectByKind(UML::Operation)->any(o | o.name = p.name) in
  if ops.ownedParameter
    ->select(p | p.direction = UML::ParameterDirectionKind::_'in')
    ->size()=1 then
      p = ops(qual)
  else if ops.ownedParameter
    ->select(p | p.direction = UML::ParameterDirectionKind::_'in')
    ->size()=0 then
      p = ops()
  else
    invalid
  endif endif) and
result = self.to
```

- `getMappedColl (in fromColl : Element) : Element [0..*]`

**postConditions:**

```
result = fromColl->collect(e | self.getMapped(e))
```

## 7.2.2.4 MainMapping

### Description

The mappings built on top of the abstract class `MainMapping` are a specific kind of `UniqueMappings` class that are always implicitly called for any element in the source model that match both their source type (as specified by their "from" property) and their filter condition. If more than one main mapping is specified for a given source type, they shall have filters that specify mutually exclusive conditions. Also, as with any unique mapping, only one target element shall be produced for a given source element.

### General Classes

- `UniqueMapping` (from Foundations)

### 7.2.2.5 Initializer

#### Description

The abstract class Initializer is the common ancestor of Mapping and Factory. It specifies a "to" property typed by the KerML::Root::Element metaclass that shall be redefined by any of its subclass for specifying the convenient type of target element. Initializers are intended to specify reusable properties' computation rules, mainly for initializing them with default values. Those rules will be inherited or redefined by the sub-classes, as appropriate.

#### Attributes

## 7.3 Mapping Helper and Library

### 7.3.1 Helper

#### Description

The Helper class contains operations that are used by multiple mapping classes. The specification is in the bodyCondition.

#### Operations

- actionOwnedRelationship (in src : Element) : Relationship [0..\*]  
Reusable mapping rule for owned relationships of a UML4SysML::Action mapping.

```
let actionInputPin: Set(UML::Element) =
  src.ownedElement->select(e | e.ocIsTypeOf(UML::ActionInputPin)) in
let triggers: Set(UML::Element) =
  src.ownedElement->select(e | e.ocIsKindOf(UML::Trigger)) in
let toElementFMS: Set(UML::Element) =
  src.ownedElement->select(e | e.ocIsKindOf(UML::Pin)) in
let toElementOMS: Set(UML::Element) =
  (((src.ownedElement - toElementFMS) - actionInputPin) - triggers) in
toElementOMS->collect(e | ElementOwningMembership_Mapping.getMapped(e))
->union(toElementFMS->collect(e | ElementFeatureMembership_Mapping.getMapped(e)))
```

- activityOwnedRelationship (in src : Element) : Relationship [0..\*]  
Reusable mapping rule for owned relationships of a UML4SysML::Activity mapping.

```
let initialNodes: Set(UML!Element) = src.ownedElement
->select(e | e.ocIsKindOf(UML!InitialNode)) in
let flowFinalNodes: Set(UML!Element) = src.ownedElement
->select(e | e.ocIsKindOf(UML!FlowFinalNode)) in
let elementsFMS: Set(UML!Element) = (src.ownedElement
->select(e | e.ocIsKindOf(UML!ControlNode)
  or e.ocIsKindOf(UML!Action)
  or e.ocIsKindOf(UML!ActivityEdge)
  or e.ocIsKindOf(UML!Property))-initialNodes)-flowFinalNodes in
let parameters: Set(UML!Parameter) = src.ownedElement
```

```

->select(e | e.ocIsKindOf(UML!Parameter)) in
let ignoreParameterNodes: Set(UML!ActivityParameterNode) = src.ownedElement
->select(e | e.ocIsKindOf(UML!ActivityParameterNode)) in
let ignoreActivityPartition: Set(UML!ActivityPartition) = src.ownedElement
->select(e | e.ocIsKindOf(UML!ActivityPartition)) in
let ignoreInterruptibleActivityRegion: Set(UML!InterruptibleActivityRegion)
= src.ownedElement
->select(e | e.ocIsKindOf(UML!InterruptibleActivityRegion)) in
let ownedClassifier: Sequence(UML!Classifier) = src.ownedElement
->select(e | e.ocIsKindOf(UML!Classifier)) in
let variables: Sequence(UML!Variable) = src.ownedElement
->select(e | e.ocIsKindOf(UML!Variable)) in
let parameterSets: Set(UML!ParameterSet) = src.ownedElement
->select(e | e.ocIsKindOf(UML!ParameterSet)) in
let elementsOMS: Set(UML!Element) = (((((((((src.ownedElement-initialNodes)-
flowFinalNodes)-elementsFMS)-parameters)-ignoreParameterNodes)-
ignoreActivityPartition)-ignoreInterruptibleActivityRegion)-ownedClassifier)-
variables)-parameterSets)-Set{src.classifierBehavior}) in
let memberships: Sequence(UML!Element) = elementsOMS
->collect(e | thisModule.ElementOwningMembership_Mapping((e)))
->union(initialNodes
->collect(e | thisModule.InitialNodeMembership_Mapping((e))))
->union(flowFinalNodes
->collect(e | thisModule.FlowFinalNodeMembership_Mapping((e))))
->union(elementsFMS
->collect(e | thisModule.ElementFeatureMembership_Mapping((e))))
->union(variables
->collect(e | thisModule.VariableMembership_Mapping((e))))
->union(parameterSets
->collect(e | thisModule.ParameterSetMembership_Mapping((e))))
->union(ownedClassifier
->collect(e | thisModule.ElementOwningMembership_Mapping((e)))) in
if src.classifierBehavior.ocIsUndefined() then
memberships
else
memberships
->append(thisModule.BehavioredClassifierFeatureMembership_Mapping((src)))
endif
endif

```

- **createUUID () : String [1]**  
Creates a UUID. The specification is implementation-specific and therefore cannot provided here.
- **excludedPin (in pin : Pin) : Boolean [1]**  
Checks if a pin is excluded from the transformation, because it is already defined as a parameter in the SysMLv1Library.

```

if (pin.owner.ocIsTypeOf(UML::AddVariableValueAction) and
(pin.name = 'value' or pin.name = 'insertAt')) then
true
else if (pin.owner.ocIsTypeOf(UML::AddStructuralFeatureValueAction) and
(pin.name = 'value' or pin.name = 'insertAt' or pin.name = 'object')) then
true
else
false
endif endif

```

- **getAppliedStereotypes (in element : Element) : Stereotype [0..\*]**  
Returns the list of applied stereotypes. The specification is implementation-specific and therefore cannot provided here.

- `getEnumerationType (in t : Enumeration) : EnumerationDefinition [1]`  
Maps a given UML4SysM::Enumeration to the appropriate SysML v2 EnumerationDefinition.

```

let enum: SYSML2::EnumerationDefinition =
  Enumeration_Mapping.getMapped(t) in
if enum.ocIsKindOf(SYSML2::EnumerationDefinition) then
  enum
else if t.name = 'VerdictKind' then
  SYSML2::EnumerationDefinition.allInstances()
  ->any(e | e.qualifiedName = 'VerificationCases::VerdictKind')

  else if t = UML::ParameterDirectionKind then
    KerML::FeatureDirectionKind

    else if t.qualifiedName =
      'SysML::Libraries::ControlValues::ControlValueKind' then
      SYSML2::EnumerationDefinition.allInstances()
      ->any(e | e.qualifiedName =
        'SysMLv1Library::Enumerations::ControlValueKind')

      else
        SYSML2::EnumerationDefinition.allInstances()
        ->any(e | e.qualifiedName =
          'SysMLv1Library::Enumerations::' + t.name)
      endif
    endif
  endif
endif

```

- `getFlowDirectionKind (in v : EnumerationLiteral) : FeatureDirectionKind [1]`  
Maps a given SysMLv1 feature direction enumeration literal to a SysML v2 FeatureDirectionKind enumeration literal.

```

if v.enumeration.qualifiedName =
  'SysML::Ports&Flows::FlowDirectionKind' then
  if v.name = 'out' then
    KerML::FeatureDirectionKind::_'out'
  else if v.name = 'in' then
    KerML::FeatureDirectionKind::_'in'
  else if v.name = 'inout' then
    KerML::FeatureDirectionKind::inout
  else
    invalid
  endif endif endif
else
  invalid
endif

```

- `getID (in src : Element) : String [1]`  
Returns the identifier of a UML4SysML::Element. The specification is implementation-specific and therefore cannot be provided here.
- `getKerMLFeatureDirectionKind (in v : EnumerationLiteral) : FeatureDirectionKind [1]`  
Maps a given SysMLv1 feature direction enumeration literal to a SysML v2 FeatureDirectionKind enumeration literal.

```

if v.enumeration.qualifiedName =
  'SysML::Ports&Flows::FeatureDirectionKind' or

```

```

    v.enumeration.qualifiedName = 'SysML::Ports&Flows::FeatureDirection' then
    if v = SysML::FeatureDirectionKind::provided then
        KerML::FeatureDirectionKind::_out'
    else if (v = SysML::FeatureDirectionKind::required) then
        KerML::FeatureDirectionKind::_in'
    else if (v = SysML::FeatureDirectionKind::providedRequired) then
        KerML::FeatureDirectionKind::inout
    else
        invalid
    endif endif endif
else
    invalid
endif

```

- **getKerMLParameterDirectionKind (in v : ParameterDirectionKind) : FeatureDirectionKind [1]**  
Maps a given SysMLv1 parameter direction enumeration literal to a SysML v2 FeatureDirectionKind enumeration literal.

```

    if v = UML::ParameterDirectionKind::_in' then
        KerML::FeatureDirectionKind::_in'
    else if (v = UML::ParameterDirectionKind::return) then
        KerML::FeatureDirectionKind::out
    else if (v = UML::ParameterDirectionKind::out) then
        KerML::FeatureDirectionKind::out
    else if (v = UML::ParameterDirectionKind::inout) then
        KerML::FeatureDirectionKind::inout
    else
        invalid
    endif endif endif endif

```

- **getKerMLVisibilityKind (in v : VisibilityKind) : VisibilityKind [1]**  
Maps a given UML4SysML::VisibilityKind enumeration literal to a SysML v2 VisibilityKind enumeration literal.

```

    if (v = UML::VisibilityKind::public) then
        KerML::VisibilityKind::public
    else if (v = UML::VisibilityKind::protected) then
        KerML::VisibilityKind::protected
    else if (v = UML::VisibilityKind::private) then
        KerML::VisibilityKind::private
    else if (v = UML::VisibilityKind::package) then
        KerML::VisibilityKind::public
    else
        invalid
    endif endif endif endif

```

- **getMetadataByName (in mdName : String) : AttributeDefinition [1]**  
Returns the metadata attribute definition element for a given metadata name.

```

SYSML2::AttributeDefiniton.allInstances()->any(e | e.name = mdName)

```

- **getMultiplicityRangeByName (in name : String) : MultiplicityRange [0..1]**  
This operation retrieve a frequently used multiplicity range defiend in the KerML Base Library

```

SYSML2::DataType.allInstances()
->any(e | e.qualifiedName = 'Base::' + name)

```

- **getRequirementStereotype** (in element : NamedElement) : Stereotype [0..1]  
Returns the requirement stereotype for a given element.

```
let stereotypes: Set(UML::Stereotype) =
  Helper.getAppliedStereotypes(element) in
stereotypes->any(s | s.general->collect(g | g.qualifiedName)
->includes('SysML::Requirements::AbstractRequirement'))
```

- **getScalarValueType** (in t : DataType) : DataType [1]  
Maps a given SysMLv1 primitive type to a SysMLv2 scalar value type.

```
if t.ocIsUndefined()
  or t.name = ''
  or t.name.ocIsUndefined()
  or t.qualifiedName.ocIsUndefined() then
  OcUndefined
else if (t.qualifiedName = 'SysML::Libraries::PrimitiveValueTypes::UnlimitedNatural')
  or t.qualifiedName.indexOf('PrimitiveTypes::UnlimitedNatural') > 0 then
  SysML2::DataType.allInstances()
  ->any(e | e.qualifiedName = 'ScalarValues::Natural')
else
  SysML2::DataType.allInstances()
  ->any(e | e.qualifiedName = 'ScalarValues::' + t.name)
endif endif
```

- **getScalarValueTypeByName** (in ptName : String) : DataType [1]  
Maps a given SysMLv1 primitive type name string to a SysMLv2 scalar value type.

```
SysML2::DataType.allInstances()
->any(e | e.qualifiedName = 'ScalarValues::' + ptName)
```

- **getTagValue** (in element : Element, in stereotypeName : String, in tagValueName : String) [1]  
Returns the value of a stereotype property. The specification is implementation-specific and therefore cannot provided here.
- **getTagValueAsElement** (in element : Element, in stereotypeName : String, in tagValueName : String) : Element [1]  
Returns the value of a stereotype property. The specification is implementation-specific and therefore cannot provided here.
- **getTagValueAsElementColl** (in element : Element, in stereotypeName : String, in tagValueName : String) : Element [0..\*]  
Returns the value of a stereotype property as a collection. The specification is implementation-specific and therefore cannot provided here.
- **getTagValueAsString** (in element : Element, in stereotypeName : String, in tagValueName : String) : String [1]  
Returns the value of a stereotype property as a string. The specification is implementation-specific and therefore cannot provided here.
- **getTagValueAsStringColl** (in element : Element, in stereotypeName : String, in tagValueName : String) : String [0..\*]  
Returns the value of a stereotype property as a string collection. The specification is implementation-specific and therefore cannot provided here.

- `globalNamespace () : Namespace [1]`

```
KerML::Package.allInstances()->any(p | p.owningNamespace->isEmpty())
```

- `hasMainMapping (in element : Element) : Boolean [1]`
- `hasStereotypeApplied (in element : Element, in stereotypeName : String) : Boolean [1]`  
Returns true if the given stereotype is applied to the element. The specification is implementation-specific and therefore cannot be provided here.
- `isConnectionDef (in association : Association) : Boolean [1]`  
Checks if a `UML4SysML::Association` is mapped to a SysML v2 `ConnectionDefinition`.

```
-- Case 1: composite association with
-- multiplicity 1..1 on owner side
let case1: Boolean = association.memberEnd
->exists(e | not e.isComposite and e.lower=1) and
association.memberEnd->exists(e | e.isComposite) in

-- Case 2: association is not composite and
-- there is no owned end with multiplicity 0..*
let case2: Boolean = not association.memberEnd
->exists(e | e.isComposite) and
not association.ownedEnd
->exists(e | e.lower = 0 and e.upper = -1) in

association.oclIsTypeOf(UML::AssociationClass) or
case1 or
case2
```

- `isInScope (in element : Element) : Boolean [1]`  
The `isInScope` operation is intended to define the scope on which the transformation will apply. If the `isInScope` operation returns "true" for a given model element, this element shall be considered by the transformation. Especially, main mappings - if any - will apply to it. It shall be ignored otherwise.
- `isRequirement (in element : Element) : Boolean [1]`  
Checks whether the stereotype `AbstractRequirement` is applied to the given element.

```
let stereotypes: Set(UML::Stereotype) =
  Helper.getAppliedStereotypes(element) in
stereotypes->exists(s | s.general->collect(g | g.qualifiedName)
->includes('SysML::Requirements::AbstractRequirement'))
```

- `packageOwnedRelationship (in src : Element) : Relationship [0..*]`  
Reusable mapping rule for owned relationships of a `UML4SysML::Package` mapping.

```
let pkg: UML::Package = src.oclAsType(UML::Package) in
if pkg.oclIsUndefined() then
  Set{}
else
  let useCaseAssociations : Set(UML::Association) =
    pkg.ownedType->select(e | e.oclIsKindOf(UML::Association))
    ->select(a | a.memberEnd->exists(e | e.type.oclIsKindOf(UML::UseCase))) in
  let unmappedAssociations : Set(UML::Association) = pkg.ownedType
    ->select(e | e.oclIsKindOf(UML::Association))
    ->reject(a | Helper.isConnectionDef(a)) in
  let imports: Set(UML::PackageImport) = pkg.packageImport
```

```

->select(pi | Helper.isInScope(pi.importedPackage)) in
let informationFlows: Set(UML::InformationFlow) = pkg.packagedElement
->select(e | e.ocIsKindOf(UML::InformationFlow))
->reject(i | i.realization->isEmpty() and i.realizingConnector->isEmpty()) in
let fromIF: Set(SysMLv2::ConnectionUsage) = informationFlows
->collect(i | i.realization->collect(r | InformationFlow_Mapping.getMapped(i, r)))
->flatten()->asSet()
->union(informationFlows->collect(i | i.realizingConnector
->collect(r | InformationFlow_Mapping.getMapped(i, r)))
->flatten()->asSet()->asSet() in
let relationships: Set(SysMLv2::Relationship) = pkg.ownedComment
->reject(c | c.annotatedElement->includes(pkg))
->collect(c | CommentOwnership_Mapping.getMapped(c))->asSet()
->union((pkg.ownedType-useCaseAssociations)-unmappedAssociations)
->collect(e | ElementOwningMembership_Mapping.getMapped(e))->asSet()
->union(imports->collect(i | PackageImport_Mapping.getMapped(i))->asSet())
->union(pkg.ownedElement
->select(e | e.ocIsKindOf(UML::Dependency)
or e.ocIsKindOf(UML::Package)
or (e.ocIsKindOf(UML::InstanceSpecification)
and e.ocAsType(UML::InstanceSpecification).classifier->notEmpty()))
->collect(e | ElementOwningMembership_Mapping.getMapped(e))->asSet()
->union(fromIF)->asSet() in
if pkg.URI.ocIsUndefined() or pkg.URI = '' then
relationships
else
relationships->including(PackageURIMetadataMembership_Mapping.getMapped(pkg))
endif endif

```

- **stateOwnedRelationship (in src : Element) : Relationship [0..\*]**  
Reusable mapping rule for owned relationships of a UML4SysML::State mapping.

```

let initialState : Set(UML::Element) =
from.ownedElement->select(e | e.ocIsKindOf(UML::Pseudostate) and
e.ocAsType(UML::Pseudostate).kind = UML::PseudostateKind::initial) in
let toElementOMS : Set(UML::Element) = from.ownedElement - initialState in
toElementOMS->collect(e | ElementOwningMembership_Mapping.getMapped(e))
->union(initialState->collect(e | InitialStateMembership_Mapping.getMapped(e)))

```

## 7.3.2 SysML v1 Library

The SysML v1 library is a SysML v2 model library with metadata definitions for annotating some model elements resulting from a transformation from a SysML v1 model using the SysML v1 to SysML v2 transformation.

```

package SysMLv1Library {

doc /*
* The SysMLv1Library defines library elements and metadata for
* SysML elements which cannot mapped to a SysML v2 element.
*/

// Library elements

action def AddValueAction {
in insertAt : ScalarValues::Natural [0..1];
in value : ScalarValues::Integer;
in isReplaceAll : ScalarValues::Boolean = false;
in target;

if not isReplaceAll {

```

```

        if insertAt == * {
            assign target := SequenceFunctions::including(target, value);
        }
        else {
            assign target :=
                SequenceFunctions::includingAt(target, value, insertAt);
        }
    } else {
        target := value;
    }
}

action def AddStructuralFeatureValueAction :> AddValueAction {
    in object;
}

action def RemoveVariableValueAction :> Actions::AssignmentAction {
    in removeAt: ScalarValues::Integer [0..1];
    in value : ScalarValues::Integer;
    in isRemoveDuplicates : ScalarValues::Boolean = false;
    in variable;

    // isRemoveDuplicates not covered yet
    if isRemoveDuplicates {
        if removeAt {
            assign variable :=
                SequenceFunctions::excludingAt(variable, value, removeAt);
        } else {
            assign variable := SequenceFunctions::excluding(variable, value);
        }
    }
}

// Metadata

metadata def ActivityEdgeData {

      attribute languages [0..*] : ScalarValues::String;
      attribute presentations [0..*] : ScalarValues::String;
    }

    package Enumerations {
      enum def ControlValueKind {
        doc /* The ControlValueKind enumeration is a type for
           * treating control values as data and for UML control pins.
           */
        enum disable;
        enum enable;
      }
    }
  }
}

```

## 7.4 Initializers

### 7.4.1 Overview

The classes presented in this subclause provide set of rules that provide default values for all non-derived features of their target metaclasses. Intentionally, initializers do not specify any "source" element. This makes them easier to specialize but prevents them from being able to provide a computation algorithm for some target features. In such a case, the operation matching the feature will be specified as abstract.

### 7.4.2 Mapping Specifications

#### 7.4.2.1 KerML Initializers

##### 7.4.2.1.1 ToAnnotatingElement\_Init

###### Description

Initializes the properties of the SysML v2 element AnnotatingElement.

###### General Classes

- ToElement\_Init (from KerMLInitializers)

###### Association Ends

- to : AnnotatingElement [1]  
{redefines: ToElement\_Init::to}

###### Operations

- annotation () : Annotation [0..\*]

Set {}

##### 7.4.2.1.2 ToAnnotation\_Init

###### Description

Initializes the properties of the SysML v2 element Annotation.

## General Classes

- ToRelationship\_Init (from KerMLInitializers)

## Association Ends

- to : Annotation [1]  
{redefines: ToRelationship\_Init::to}

## Operations

- annotatedElement () : Element [1] {redefines target, abstract}
- annotatingElement () : AnnotatingElement [1] {redefines source, abstract}
- owningAnnotatedElement () : Element [0..1]

null

### 7.4.2.1.3 ToAssociation\_Init

#### Description

Initializes the properties of the SysML v2 element Association.

## General Classes

- ToClassifier\_Init (from KerMLInitializers)
- ToRelationship\_Init (from KerMLInitializers)

## Association Ends

- to : Association [1]  
{redefines: ToRelationship\_Init::to}  
{redefines: ToClassifier\_Init::to}

### 7.4.2.1.4 ToBehavior\_Init

#### Description

Initializes the properties of the SysML v2 element Behavior.

## General Classes

- ToClassifier\_Init (from KerMLInitializers)

## Association Ends

- to : Behavior [1]  
{redefines: ToClassifier\_Init::to}

### 7.4.2.1.5 ToClassifier\_Init

#### Description

Initializes the properties of the SysML v2 element Classifier.

## General Classes

- ToType\_Init (from KerMLInitializers)

#### Association Ends

- to : Classifier [1]  
{redefines: ToType\_Init::to}

#### 7.4.2.1.6 ToComment\_Init

##### Description

Initializes the properties of the SysML v2 element Comment.

##### General Classes

- ToAnnotatingElement\_Init (from KerMLInitializers)

#### Association Ends

- to : Comment [1]  
{redefines: ToAnnotatingElement\_Init::to}

##### Operations

- body () : String [1] {abstract}
- locale () : String [1]

null

#### 7.4.2.1.7 ToConjugation\_Init

##### Description

Initializes the properties of the SysML v2 element Conjugation.

##### General Classes

- ToRelationship\_Init (from KerMLInitializers)

#### Association Ends

- to : Conjugation [1]  
{redefines: ToRelationship\_Init::to}

##### Operations

- conjugatedType () : Type [1] {redefines source, abstract}
- originalType () : Type [1] {redefines target, abstract}

#### 7.4.2.1.8 ToConnector\_Init

##### Description

Initializes the properties of the SysML v2 element Connector.

##### General Classes

- ToFeature\_Init (from KerMLInitializers)
- ToRelationship\_Init (from KerMLInitializers)

#### Association Ends

- to : Connector [1]  
{redefines: ToFeature\_Init::to}  
{redefines: ToRelationship\_Init::to}

#### Operations

- isDirected () : Boolean [1]

false

#### 7.4.2.1.9 ToDocumentation\_Init

##### Description

Initializes the properties of the SysML v2 element Documentation.

##### General Classes

- ToComment\_Init (from KerMLInitializers)

#### Association Ends

- to : Documentation [1]  
{redefines: ToComment\_Init::to}

#### 7.4.2.1.10 ToElement\_Init

##### Description

This is the general abstract class to be used as an ancestor for any class mapping specification.

##### General Classes

- Initializer (from Foundations)

#### Association Ends

- to : Element [1]  
{redefines: Initializer::to}

#### Operations

- aliasId () : String [0..\*]

Set {}

- declaredName () : String [0..1]

null

- `elementId () : String [1]`

`Helper.createUUID()`

- `ownedRelationship () : Relationship [0..*]`

`Set {}`

- `shortName () : String [0..1]`

`null`

### Constraints

- `from_and_to_types`  
`from.ocIsKindOf(factory.srcType) and to.ocIsKindOf(factory.tgtType)`

#### 7.4.2.1.11 ToEndFeatureMembership\_Init

##### Description

Initializes the properties of the SysML v2 element EndFeatureMembership.

##### General Classes

- ToFeatureMembership\_Init (from KerMLInitializers)

##### Association Ends

- `to : EndFeatureMembership [1]`  
`{redefines: ToFeatureMembership_Init::to}`

#### 7.4.2.1.12 ToExpression\_Init

##### Description

Initializes the properties of the SysML v2 element Expression.

##### General Classes

- ToStep\_Init (from KerMLInitializers)

##### Association Ends

- `to : Expression [1]`  
`{redefines: ToStep_Init::to}`

#### 7.4.2.1.13 ToFeature\_Init

##### Description

Initializes the properties of the SysML v2 element Feature.

##### General Classes

- ToType\_Init (from KerMLInitializers)

#### Association Ends

- to : Feature [1]  
{redefines: ToType\_Init::to}

#### Operations

- direction () : FeatureDirectionKind [0..1]

null

- isUnique () : Boolean [1]

true

#### 7.4.2.1.14 ToFeatureChainExpression\_Init

##### Description

Initializes the properties of the SysML v2 element FeatureChainExpression.

##### General Classes

- ToOperatorExpression\_Init (from KerMLInitializers)

## Association Ends

- to : FeatureChainExpression [1]  
{redefines: ToOperatorExpression\_Init::to}

### 7.4.2.1.15 ToFeatureChaining\_Init

#### Description

Initializes the properties of the SysML v2 element FeatureChaining.

#### General Classes

- ToRelationship\_Init (from KerMLInitializers)

## Association Ends

- to : FeatureChaining [1]  
{redefines: ToRelationship\_Init::to}

#### Operations

- chainingFeature () : Feature [1] {redefines target, abstract}

### 7.4.2.1.16 ToFeatureMembership\_Init

#### Description

Initializes the properties of the SysML v2 element FeatureMembership.

#### General Classes

- ToOwningMembership\_Init (from KerMLInitializers)
- ToTypeFeaturing\_Init (from KerMLInitializers)

## Association Ends

- to : FeatureMembership [1]  
{redefines: ToTypeFeaturing\_Init::to}  
{redefines: ToOwningMembership\_Init::to}

#### Operations

- ownedMemberFeature () : Feature [1] {redefines ownedMemberElement}  
  
self.upperBound
- ownedRelatedElement () : Element [0..\*] {redefines ownedRelatedElement}  
  
Set {self.ownedMemberFeature () }

### 7.4.2.1.17 ToFeatureReferenceExpression\_Init

#### Description

Initializes the properties of the SysML v2 element FeatureReferenceExpression.

#### General Classes

- ToExpression\_Init (from KerMLInitializers)

#### Association Ends

- to : FeatureReferenceExpression [1]  
{redefines: ToExpression\_Init::to}

#### 7.4.2.1.18 ToFeatureTyping\_Init

##### Description

Initializes the properties of the SysML v2 element FeatureTyping.

#### General Classes

- ToSpecialization\_Init (from KerMLInitializers)

#### Association Ends

- to : FeatureTyping [1]  
{redefines: ToSpecialization\_Init::to}

#### Operations

- type () : Type [1] {redefines general, abstract}
- typedFeature () : Feature [1] {redefines specific, abstract}

#### 7.4.2.1.19 ToFeatureValue\_Init

##### Description

Initializes the properties of the SysML v2 element FeatureValue.

#### General Classes

- ToOwningMembership\_Init (from KerMLInitializers)

#### Association Ends

- to : FeatureValue [1]  
{redefines: ToOwningMembership\_Init::to}

#### Operations

- featureWithValue () : Feature [1] {redefines ownedMemberElement, abstract}
- isDefault () : Boolean [1]

false

- isInitial () : Boolean [1]

false

- ownedRelatedElement () : Element [0..\*] {redefines ownedRelatedElement}

Set {self.value () }

- value () : Expression [1] {redefines ownedMemberElement, abstract}

#### **7.4.2.1.20 ToFlow\_Init**

##### **Description**

Initializes the properties of the SysML v2 element Flow.

##### **General Classes**

- ToConnector\_Init (from KerMLInitializers)

##### **Association Ends**

- to : Flow [1]  
{redefines: ToConnector\_Init::to}

#### **7.4.2.1.21 ToFunction\_Init**

##### **Description**

Initializes the properties of the SysML v2 element Function.

##### **General Classes**

- ToBehavior\_Init (from KerMLInitializers)

##### **Association Ends**

- to : Function [1]  
{redefines: ToBehavior\_Init::to}

#### **7.4.2.1.22 ToImport\_Init**

##### **Description**

Initializes the properties of the SysML v2 element Import.

##### **General Classes**

- ToRelationship\_Init (from KerMLInitializers)

##### **Association Ends**

- to : Import [1]  
{redefines: ToRelationship\_Init::to}

## Operations

- importedMemberName () : String [0..1]

null

- isImportAll () : Boolean [1]

false

- isRecursive () : Boolean [1]

false

- visibility () : VisibilityKind [1]

KerML::VisibilityKind::public

### 7.4.2.1.23 ToInteraction\_Init

#### Description

Initializes the properties of the SysML v2 element Interaction.

#### General Classes

- ToAssociation\_Init (from KerMLInitializers)
- ToBehavior\_Init (from KerMLInitializers)

#### Association Ends

- to : Interaction [1]  
{redefines: ToAssociation\_Init::to}  
{redefines: ToBehavior\_Init::to}

### 7.4.2.1.24 ToInvocationExpression\_Init

#### Description

Initializes the properties of the SysML v2 element InvocationExpression.

#### General Classes

- ToExpression\_Init (from KerMLInitializers)

#### Association Ends

- to : InvocationExpression [1]  
{redefines: ToExpression\_Init::to}

### 7.4.2.1.25 ToMembership\_Init

#### Description

Initializes the properties of the SysML v2 element Membership.

#### General Classes

- ToRelationship\_Init (from KerMLInitializers)

#### Association Ends

- to : Membership [1]  
{redefines: ToRelationship\_Init::to}

#### Operations

- memberElement () : Element [1] {redefines target, abstract}
- memberName () : String [0..1]

null

- memberShortName () : String [0..1]

null

- membershipOwningNamespace () : Element [0..\*] {redefines source, abstract}
- visibility () : VisibilityKind [1]

KerML::VisibilityKind::public

#### 7.4.2.1.26 ToMembershipImport\_Init

##### Description

Initializes the properties of the SysML v2 element MembershipImport.

#### General Classes

- ToImport\_Init (from KerMLInitializers)

#### Association Ends

- to : MembershipImport [1]  
{redefines: ToImport\_Init::to}

#### Operations

- importedMembership () : Namespace [1] {redefines target, abstract}

#### 7.4.2.1.27 ToNamespace\_Init

##### Description

Initializes the properties of the SysML v2 element Namespace.

#### General Classes

- ToElement\_Init (from KerMLInitializers)

#### **Association Ends**

- to : Namespace [1]  
{redefines: ToElement\_Init::to}

#### **7.4.2.1.28 ToNamespaceImport\_Init**

##### **Description**

Initializes the properties of the SysML v2 element NamespaceImport.

##### **General Classes**

- ToImport\_Init (from KerMLInitializers)

#### **Association Ends**

- to : NamespaceImport [1]  
{redefines: ToImport\_Init::to}

##### **Operations**

- importedNamespace () : Namespace [1] {redefines target, abstract}

#### **7.4.2.1.29 ToOperatorExpression\_Init**

##### **Description**

Initializes the properties of the SysML v2 element OperatorExpression.

##### **General Classes**

- ToExpression\_Init (from KerMLInitializers)

#### **Association Ends**

- to : OperatorExpression [1]  
{redefines: ToExpression\_Init::to}

##### **Operations**

- operator () : String [1]{abstract}

#### **7.4.2.1.30 ToOwningMembership\_Init**

##### **Description**

Initializes the properties of the SysML v2 element OwningMembership.

##### **General Classes**

- ToMembership\_Init (from KerMLInitializers)

#### **Association Ends**

- to : OwingMembership [1]  
{redefines: ToMembership\_Init::to}

### Operations

- ownedMemberElement () : Element [1] {redefines memberElement, abstract}
- ownedRelatedElement () : Element [0..\*] {redefines ownedRelatedElement}

```
Set{self.ownedMemberElement() }
```

#### 7.4.2.1.31 ToPackage\_Init

##### Description

Initializes the properties of the SysML v2 element Package.

##### General Classes

- ToNamespace\_Init (from KerMLInitializers)

##### Association Ends

- to : Package [1]  
{redefines: ToNamespace\_Init::to}

#### 7.4.2.1.32 ToParameterMembership\_Init

##### Description

Initializes the properties of the SysML v2 element ParameterMembership.

##### General Classes

- ToFeatureMembership\_Init (from KerMLInitializers)

##### Association Ends

- to : ParameterMembership [1]  
{redefines: ToFeatureMembership\_Init::to}  
{redefines: ElementOwningMembership\_Mapping::to}

### Operations

- ownedMemberParameter () : Feature [1] {redefines ownedMemberFeature}

```
null
```

- ownedRelatedElement () : Element [0..\*] {redefines ownedRelatedElement}

```
Set{self.ownedMemberParameter() }
```

#### 7.4.2.1.33 ToPredicate\_Init

##### Description

Initializes the properties of the SysML v2 element Predicate.

#### General Classes

- ToFunction\_Init (from KerMLInitializers)

#### Association Ends

- to : Predicate [1]  
{redefines: ToFunction\_Init::to}

#### 7.4.2.1.34 ToRedefinition\_Init

##### Description

Initializes the properties of the SysML v2 element Redefinition.

#### General Classes

- ToSubsetting\_Init (from KerMLInitializers)

#### Association Ends

- to : Redefinition [1]  
{redefines: ToSubsetting\_Init::to}

#### Operations

- redefinedFeature () : Feature [1] {redefines subsettedFeature, abstract}
- redefiningFeature () : Feature [1]{abstract}

#### 7.4.2.1.35 ToReferenceSubsetting\_Init

##### Description

Initializes the properties of the SysML v2 element ReferenceSubsetting.

#### General Classes

- ToSubsetting\_Init (from KerMLInitializers)

#### Association Ends

- to : ReferenceSubsetting [1]  
{redefines: ToSubsetting\_Init::to}

#### Operations

- referencedFeature () : Feature [1] {redefines subsettedFeature, abstract}

#### 7.4.2.1.36 ToRelationship\_Init

##### Description

Initializes the properties of the SysML v2 element Relationship.

#### General Classes

- ToElement\_Init (from KerMLInitializers)

#### Association Ends

- to : Relationship [1]  
{redefines: ToElement\_Init::to}

#### Operations

- ownedRelatedElement () : Element [0..\*]

Set {}

- source () : Element [0..\*]

Set {}

- target () : Element [0..\*]

Set {}

#### 7.4.2.1.37 ToReturnParameterMembership\_Init

##### Description

Initializes the properties of the SysML v2 element ReturnParameterMembership.

##### General Classes

- ToParameterMembership\_Init (from KerMLInitializers)

#### Association Ends

- to : ReturnParameterMembership [1]  
{redefines: ToParameterMembership\_Init::to}

#### Operations

- isComposite (in src : Element) : Boolean [1]  
returns "true" if the element provided as the actual parameter value can have a mapping to an instance of the type specified by the "to" attribute (i.e. can be used as a value for the "from" attribute)

false

#### 7.4.2.1.38 ToSpecialization\_Init

##### Description

Initializes the properties of the SysML v2 element Specialization.

##### General Classes

- ToRelationship\_Init (from KerMLInitializers)

### Association Ends

- to : Specialization [1]  
{redefines: ToRelationship\_Init::to}

### Operations

- general () : Type [1] {redefines target, abstract}
- specific () : Type [1] {redefines source, abstract}

#### 7.4.2.1.39 ToStep\_Init

### Description

Initializes the properties of the SysML v2 element Step.

### General Classes

- ToFeature\_Init (from KerMLInitializers)

### Association Ends

- to : Step [1]  
{redefines: ToFeature\_Init::to}

#### 7.4.2.1.40 ToSubclassification\_Init

### Description

Initializes the properties of the SysML v2 element Subclassification.

### General Classes

- ToSpecialization\_Init (from KerMLInitializers)

### Association Ends

- to : Subclassification [1]  
{redefines: ToSpecialization\_Init::to}

### Operations

- subclassifier () : Classifier [1]  
  
null
- superclassifier () : Classifier [1]  
  
null

#### 7.4.2.1.41 ToSubsetting\_Init

### Description

Initializes the properties of the SysML v2 element Subsetting.

## General Classes

- ToSpecialization\_Init (from KerMLInitializers)

## Association Ends

- to : Subsetting [1]  
{redefines: ToSpecialization\_Init::to}

## Operations

- ownedRelatedElement () : Element [0..\*] {redefines ownedRelatedElement}

Set {}

- subsettingFeature () : Feature [1] {redefines general, abstract}

### 7.4.2.1.42 ToSuccession\_Init

#### Description

Initializes the properties of the SysML v2 element Succession.

## General Classes

- ToConnector\_Init (from KerMLInitializers)

## Association Ends

- to : Succession [1]  
{redefines: ToConnector\_Init::to}

### 7.4.2.1.43 ToSuccessionItemFlow\_Init

#### Description

Initializes the properties of the SysML v2 element SuccessionFlow.

## General Classes

- ToItemFlow\_Init (from KerMLInitializers)
- ToSuccession\_Init (from KerMLInitializers)

## Association Ends

- to : SuccessionFlow [1]  
{redefines: ToSuccession\_Init::to}  
{redefines: ToItemFlow\_Init::to}

### 7.4.2.1.44 ToTextualRepresentation\_Init

#### Description

Initializes the properties of the SysML v2 element TextualRepresentation.

## General Classes

- ToAnnotatingElement\_Init (from KerMLInitializers)

#### Association Ends

- to : TextualRepresentation [1]  
{redefines: ToAnnotatingElement\_Init::to}

#### Operations

- body () : String [1]{abstract}
- language () : String [1]{abstract}

#### 7.4.2.1.45 ToType\_Init

##### Description

Initializes the properties of the SysML v2 element Type.

##### General Classes

- ToNamespace\_Init (from KerMLInitializers)

#### Association Ends

- to : Type [1]  
{redefines: ToNamespace\_Init::to}

#### Operations

- isAbstract () : Boolean [1]

false

- isSufficient () : Boolean [1]

false

#### 7.4.2.1.46 ToTypeFeaturing\_Init

##### Description

Initializes the properties of the SysML v2 element TypeFeaturing.

##### General Classes

- ToRelationship\_Init (from KerMLInitializers)

#### Association Ends

- to : TypeFeaturing [1]  
{redefines: ToRelationship\_Init::to}

#### Operations

- featureOfType () : Feature [1] {redefines source, abstract}

- `featuringType () : Type [1] {redefines target, abstract}`

### 7.4.2.2 System Initializers

#### 7.4.2.2.1 ToActionUsage\_Init

##### Description

Initializes the properties of the SysML v2 element ActionUsage.

##### General Classes

- `ToStep_Init` (from `KerMLInitializers`)
- `ToUsage_Init` (from `SystemInitializers`)

##### Association Ends

- `to : ActionUsage [1]`  
`{redefines: ToStep_Init::to}`  
`{redefines: ToUsage_Init::to}`

##### Operations

- `isComposite () : Boolean [1] {redefines isComposite}`

`true`

#### 7.4.2.2.2 ToActorMembership\_Init

##### Description

Initializes the properties of the SysML v2 element ActorMembership.

##### General Classes

- `ToParameterMembership_Init` (from `KerMLInitializers`)

##### Association Ends

- `to : ActorMembership [1]`  
`{redefines: ToParameterMembership_Init::to}`

#### 7.4.2.2.3 ToAssignmentActionUsage\_Init

##### Description

Initializes the properties of the SysML v2 element AssignmentActionUsage.

##### General Classes

- `ToActionUsage_Init` (from `SystemInitializers`)

##### Association Ends

- `to : AssignmentActionUsage [1]`  
`{redefines: ToActionUsage_Init::to}`

#### 7.4.2.2.4 ToBindingConnectorAsUsage\_Init

##### Description

Initializes the properties of the SysML v2 element BindingConnectorAsUsage.

##### General Classes

- ToConnectionUsage\_Init (from SystemInitializers)

##### Association Ends

- to : BindingConnectorAsUsage [1]  
{redefines: ToConnectionUsage\_Init::to}

#### 7.4.2.2.5 ToCalculationUsage\_Init

##### Description

Initializes the properties of the SysML v2 element CalculationUsage.

##### General Classes

- ToActionUsage\_Init (from SystemInitializers)

##### Association Ends

- to : CalculationUsage [1]  
{redefines: ToActionUsage\_Init::to}

#### 7.4.2.2.6 ToConjugatedPortDefinition\_Init

##### Description

Initializes the properties of the SysML v2 element ConjugatedPortDefinition.

##### General Classes

- ToPortDefinition\_Init (from SystemInitializers)

##### Association Ends

- to : ConjugatedPortDefinition [1]  
{redefines: ToPortDefinition\_Init::to}

#### 7.4.2.2.7 ToConjugatedPortTyping\_Init

##### Description

Initializes the properties of the SysML v2 element ConjugatedPortTyping.

##### General Classes

- ToFeatureTyping\_Init (from KerMLInitializers)

##### Association Ends

- to : ConjugatedPortTyping [1]  
{redefines: ToFeatureTyping\_Init::to}

#### Operations

- conjugatedPortDefinition () : ConjugatedPortDefinition [1] {redefines type, abstract}
- portDefinition () : PortDefinition [1] {abstract}

#### 7.4.2.2.8 ToConnectionUsage\_Init

##### Description

Initializes the properties of the SysML v2 element ConnectionUsage.

##### General Classes

- ToPartUsage\_Init (from SystemInitializers)

##### Association Ends

- to : ConnectionUsage [1]  
{redefines: ToPartUsage\_Init::to}

#### 7.4.2.2.9 ToConstraintDefinition\_Init

##### Description

Initializes the properties of the SysML v2 element ConstraintDefinition.

##### General Classes

- ToDefinition\_Init (from SystemInitializers)

##### Association Ends

- to : ConstraintDefinition [1]  
{redefines: ToDefinition\_Init::to}  
{redefines: ToFunction\_Init::to}

#### 7.4.2.2.10 ToConstraintUsage\_Init

##### Description

Initializes the properties of the SysML v2 element ConstraintUsage.

##### General Classes

- ToUsage\_Init (from SystemInitializers)

##### Association Ends

- to : ConstraintUsage [1]  
{redefines: ToUsage\_Init::to}

#### 7.4.2.2.11 ToDefinition\_Init

##### Description

Initializes the properties of the SysML v2 element Definition.

#### General Classes

- ToClassifier\_Init (from KerMLInitializers)

#### Association Ends

- to : Definition [1]  
{redefines: ToClassifier\_Init::to}

#### Operations

- isVariation () : Boolean [1]

false

### 7.4.2.2.12 ToEventOccurrenceUsage\_Init

#### Description

Initializes the properties of the SysML v2 element EventOccurrenceUsage.

#### General Classes

- ToOccurrenceUsage\_Init (from SystemInitializers)

#### Association Ends

- to : EventOccurrenceUsage [1]  
{redefines: ToOccurrenceUsage\_Init::to}

### 7.4.2.2.13 ToFlowUsage\_Init

#### Description

Initializes the properties of the SysML v2 element FlowUsage.

#### General Classes

- ToActionUsage\_Init (from SystemInitializers)
- ToConnector\_Init (from KerMLInitializers)

#### Association Ends

- to : FlowUsage [1]  
{redefines: ToConnector\_Init::to}  
{redefines: ToActionUsage\_Init::to}

#### Operations

- isDirected () : Boolean [1] {redefines isDirected}

true

#### **7.4.2.2.14 ToltemDefinition\_Init**

##### **Description**

Initializes the properties of the SysML v2 element ItemDefinition.

##### **General Classes**

- ToDefinition\_Init (from SystemInitializers)

##### **Association Ends**

- to : ItemDefinition [1]  
{redefines: ToDefinition\_Init::to}

#### **7.4.2.2.15 ToltemFeature\_Init**

##### **Description**

Initializes the properties of the SysML v2 element ItemFeature.

##### **General Classes**

- ToFeature\_Init (from KerMLInitializers)

##### **Association Ends**

- to : PayloadFeature [1]  
{redefines: ToFeature\_Init::to}

#### **7.4.2.2.16 ToltemUsage\_Init**

##### **Description**

Generic mapping class for mappings to the SysML v2 element ItemUsage.

##### **General Classes**

- ToOccurrenceUsage\_Init (from SystemInitializers)

##### **Association Ends**

- to : ItemUsage [1]  
{redefines: ToOccurrenceUsage\_Init::to}

#### **7.4.2.2.17 ToMetadataUsage\_Init**

##### **Description**

Initializes the properties of the SysML v2 element MetadataUsage.

##### **General Classes**

- ToUsage\_Init (from SystemInitializers)

### Association Ends

- to : MetadataUsage [1]  
{redefines: ToUsage\_Init::to}

#### 7.4.2.2.18 ToObjectiveMembership\_Init

##### Description

Initializes the properties of the SysML v2 element ObjectiveMembership.

##### General Classes

- ToFeatureMembership\_Init (from KerMLInitializers)

### Association Ends

- to : ObjectiveMembership [1]  
{redefines: ToFeatureMembership\_Init::to}

#### 7.4.2.2.19 ToOccurrenceDefinition\_Init

##### Description

Initializes the properties of the SysML v2 element OccurrenceDefinition.

##### General Classes

- ToDefinition\_Init (from SystemInitializers)

### Association Ends

- to : OccurrenceDefinition [1]  
{redefines: ToDefinition\_Init::to}

##### Operations

- isIndividual () : Boolean [1]

false

#### 7.4.2.2.20 ToOccurrenceUsage\_Init

##### Description

Initializes the properties of the SysML v2 element OccurrenceUsage.

##### General Classes

- ToUsage\_Init (from SystemInitializers)

### Association Ends

- to : OccurrenceUsage [1]  
{redefines: ToUsage\_Init::to}

## Operations

- `isIndividual () : Boolean [1]`

`false`

- `portionKind () : PortionKind [1]`

`invalid`

### 7.4.2.2.21 ToPartUsage\_Init

#### Description

Initializes the properties of the SysML v2 element PartUsage.

#### General Classes

- `ToUsage_Init` (from `SystemInitializers`)

#### Association Ends

- `to : PartUsage [1]`  
{redefines: `ToUsage_Init::to`}

### 7.4.2.2.22 ToPerformActionUsage\_Init

#### Description

Initializes the properties of the SysML v2 element PerformActionUsage.

#### General Classes

- `ToActionUsage_Init` (from `SystemInitializers`)

#### Association Ends

- `to : PerformActionUsage [1]`  
{redefines: `ToActionUsage_Init::to`}

### 7.4.2.2.23 ToPortConjugation\_Init

#### Description

Initializes the properties of the SysML v2 element PortConjugation.

#### General Classes

- `ToConjugation_Init` (from `KerMLInitializers`)

#### Association Ends

- `to : PortConjugation [1]`  
{redefines: `ToConjugation_Init::to`}

## Operations

- originalPortDefinition () : PortDefinition [1] {redefines originalType, abstract}

### 7.4.2.2.24 ToPortDefinition\_Init

#### Description

Initializes the properties of the SysML v2 element PortDefinition.

#### General Classes

- ToDefinition\_Init (from SystemInitializers)

#### Association Ends

- to : PortDefinition [1]  
{redefines: ToDefinition\_Init::to}

### 7.4.2.2.25 ToReferenceUsage\_Init

#### Description

Provides the basic features to map to a ReferenceUsage element.

#### General Classes

- ToUsage\_Init (from SystemInitializers)

#### Association Ends

- to : ReferenceUsage [1]  
{redefines: ToUsage\_Init::to}

### 7.4.2.2.26 ToRequirementUsage\_Init

#### Description

Initializes the properties of the SysML v2 element RequirementUsage.

#### General Classes

- ToUsage\_Init (from SystemInitializers)

#### Association Ends

- to : RequirementUsage [1]  
{redefines: ToUsage\_Init::to}

### 7.4.2.2.27 ToStateSubactionMembership\_Init

#### Description

Initializes the properties of the SysML v2 element StateSubactionMembership.

#### General Classes

- ToFeatureMembership\_Init (from KerMLInitializers)

#### **Association Ends**

- to : StateSubactionMembership [1]  
{redefines: ToFeatureMembership\_Init::to}

#### **7.4.2.2.28 ToStateUsage\_Init**

##### **Description**

Initializes the properties of the SysML v2 element StateUsage.

##### **General Classes**

- ToActionUsage\_Init (from SystemInitializers)

#### **Association Ends**

- to : StateUsage [1]  
{redefines: ToActionUsage\_Init::to}

#### **7.4.2.2.29 ToSubjectMembership\_Init**

##### **Description**

Initializes the properties of the SysML v2 element SubjectMembership.

##### **General Classes**

- ToParameterMembership\_Init (from KerMLInitializers)

#### **Association Ends**

- to : SubjectMembership [1]  
{redefines: ToParameterMembership\_Init::to}

#### **7.4.2.2.30 ToTransitionUsage\_Init**

##### **Description**

Initializes the properties of the SysML v2 element TransitionUsage.

##### **General Classes**

- ToActionUsage\_Init (from SystemInitializers)

#### **Association Ends**

- to : TransitionUsage [1]  
{redefines: ToActionUsage\_Init::to}

#### **7.4.2.2.31 ToTriggerInvocationExpression\_Init**

##### **Description**

Initializes the properties of the SysML v2 element TriggerInvocationExpression.

## General Classes

- ToInvocationExpression\_Init (from KerMLInitializers)

## Association Ends

- to : TriggerInvocationExpression [1]  
{redefines: ToInvocationExpression\_Init::to}

## Operations

- kind () : TriggerKind [0..1] {redefines direction, abstract}

### 7.4.2.2.32 ToUsage\_Init

#### Description

Initializes the properties of the SysML v2 element Usage.

## General Classes

- ToFeature\_Init (from KerMLInitializers)

## Association Ends

- to : Usage [1]  
{redefines: ToFeature\_Init::to}

## Operations

- isVariation () : Boolean [1]

false

## 7.5 Factories

### 7.5.1 Overview

The classes presented in this subclause specify facilities for creating elements in the target model form an arbitrary set of zero to many input parameters. After the target element is created, no link between it and an the value of inputs parameter (if any) will be preserved.

### 7.5.2 Mapping Specifications

#### 7.5.2.1 LiteralString\_Factory

#### Description

Factory class to create a LiteralString element.

## General Classes

- Factory (from Foundations)
- ToExpression\_Init (from KerMLInitializers)

## Association Ends

- string : String [1]
- to : LiteralString [1]  
{redefines: ToExpression\_Init::to}

### Operations

- create (in string : String) : LiteralString [1]
- ownedRelationship () : Relationship [0..\*] {redefines ownedRelationship}

```
Set{ReturnParameterFeatureMembership_Factory.create() }
```

### 7.5.2.2 StringParameterFeature\_Factory

#### Description

Factory class to create a feature element representing a string.

#### General Classes

- Factory (from Foundations)
- ToFeature\_Init (from KerMLInitializers)

#### Association Ends

- string : String [1]

### Operations

- create (in string : String) : Feature [1]
- ownedRelationship () : Relationship [0..\*] {redefines ownedRelationship}

```
Set{StringParameterFeatureValue_Factory.create(string) }
```

### 7.5.2.3 StringParameterFeatureValue\_Factory

#### Description

Factory class to create a string feature value relationship for a feature element.

#### General Classes

- Factory (from Foundations)
- ToFeatureValue\_Init (from KerMLInitializers)

#### Association Ends

- string : String [1]

### Operations

- create (in string : String) : FeatureValue [1]
- value () : Expression [1] {redefines value}

```
LiteralString_Factory.create(string)
```

#### 7.5.2.4 StringParameterMembership\_Factory

##### Description

Factory class to create a parameter membership relationship for a feature element representing a string.

##### General Classes

- Factory (from Foundations)
- ToParameterMembership\_Init (from KerMLInitializers)

##### Association Ends

- string : String [1]

##### Operations

- create (in string : String) : ParameterMembership [1]
- ownedMemberParameter () : Feature [1] {redefines ownedMemberParameter}

```
StringParameterFeature_Factory.create(string)
```

#### 7.5.2.5 SubjectMembership\_Factory

##### Description

Factory class to create a subject membership relationship for a given subject.

##### General Classes

- Factory (from Foundations)
- ToSubjectMembership\_Init (from SystemInitializers)

##### Association Ends

- subject : Type [1]

##### Operations

- create (in subject : Type) : SubjectMembership [1]
- ownedMemberParameter () : Feature [1] {redefines ownedMemberParameter}

```
subject
```

#### 7.5.2.6 AssignmentActionUsage\_Factory

##### Description

Factory to create an assignment action usage.

##### General Classes

- Factory (from Foundations)
- ToAssignmentActionUsage\_Init (from SystemInitializers)

## Operations

- `create () : AssignmentActionUsage [1]`
- `ownedRelationship () : Relationship [0..*]` {redefines `ownedRelationship`}

```
Set{AssignmentActionUsageParameterMembership_Factory.create(),  
DirectedReferenceUsageParameterMembership_Factory.create(  
    KerML::FeatureDirectionKind::_'in')}
```

### 7.5.2.7 AssignmentActionUsageFeatureMembership2\_Factory

#### Description

Factory class to create a feature membership relationship for a feature element created by the factory class `AssignmentActionUsageTargetReferenceUsageIn2_Factory`.

#### General Classes

- `Factory` (from `Foundations`)
- `ToFeatureMembership_Init` (from `KerMLInitializers`)

## Operations

- `create () : FeatureMembership [1]`
- `ownedMemberFeature () : Feature [1]` {redefines `ownedMemberFeature`}

```
AssignmentActionUsageTargetReferenceUsageIn2_Factory.create()
```

### 7.5.2.8 AssignmentActionUsageFeatureMembership3\_Factory

#### Description

Factory class to create a feature membership relationship for a feature element created by the factory class `AssignmentActionUsageTargetReferenceUsageIn3_Factory`.

#### General Classes

- `Factory` (from `Foundations`)
- `ToFeatureMembership_Init` (from `KerMLInitializers`)

## Operations

- `create () : FeatureMembership [1]`
- `ownedMemberFeature () : Feature [1]` {redefines `ownedMemberFeature`}

```
AssignmentActionUsageTargetReferenceUsageIn3_Factory.create()
```

### 7.5.2.9 AssignmentActionUsageOwningMembership\_Factory

#### Description

Factory class to create an owning membership relationship for an element created by the factory class `AssignmentActionUsage_Factory`.

## General Classes

- Factory (from Foundations)
- ToOwningMembership\_Init (from KerMLInitializers)

## Operations

- create () : OwningMembership [1]
- ownedMemberElement () : Element [1] {redefines ownedMemberElement}

```
AssignmentActionUsage_Factory.create()
```

### 7.5.2.10 AssignmentActionUsageParameterMembership\_Factory

#### Description

Factory class to create a parameter membership relationship for a feature element created by the factory class AssignmentActionUsageReferenceUsageIn1\_Factory.

## General Classes

- Factory (from Foundations)
- ToParameterMembership\_Init (from KerMLInitializers)

## Operations

- create () : ParameterMembership [1]
- ownedMemberParameter () : Feature [1] {redefines ownedMemberParameter}

```
AssignmentActionUsageReferenceUsageIn1_Factory.create()
```

### 7.5.2.11 AssignmentActionUsageReferenceUsageIn1\_Factory

#### Description

Factory class creating a reference usage element with direction "in" as parameter of an assignment action usage.

## General Classes

- Factory (from Foundations)
- ToReferenceUsage\_Init (from SystemInitializers)

## Operations

- create () : ReferenceUsage [1]
- direction () : FeatureDirectionKind [0..1] {redefines direction}

```
KerML::FeatureDirectionKind::_in'
```

- ownedRelationship () : Relationship [0..\*] {redefines ownedRelationship}

```
Set{AssignmentActionUsageFeatureMembership2_Factory.create() }
```

### 7.5.2.12 AssignmentActionUsageTargetReferenceUsageIn2\_Factory

#### Description

Factory class creating a reference usage element as an owned feature of the reference usage of an assignment action usage.

#### General Classes

- Factory (from Foundations)
- ToReferenceUsage\_Init (from SystemInitializers)

#### Operations

- create () : ReferenceUsage [1]
- ownedRelationship () : Relationship [0..\*] {redefines ownedRelationship}

```
Set{AssignmentActionUsageFeatureMembership3_Factory.create() }
```

### 7.5.2.13 AssignmentActionUsageTargetReferenceUsageIn3\_Factory

#### Description

Factory class creating a reference usage element as an owned feature of the reference usage of an assignment action usage.

#### General Classes

- Factory (from Foundations)
- ToReferenceUsage\_Init (from SystemInitializers)

#### Operations

- create () : ReferenceUsage [1]

### 7.5.2.14 DirectedReferenceUsage\_Factory

#### Description

Factory class creating a reference usage element with a given direction and without owned relationships.

#### General Classes

- Factory (from Foundations)
- ToReferenceUsage\_Init (from SystemInitializers)

#### Association Ends

- featureDirectionKind : FeatureDirectionKind [1]

#### Operations

- create (in featureDirectionKind : FeatureDirectionKind) : ReferenceUsage [1]
- direction () : FeatureDirectionKind [0..1] {redefines direction}

`featureDirectionKind`

#### 7.5.2.15 DirectedReferenceUsageParameterMembership\_Factory

##### Description

Factory class to create a parameter membership relationship for a feature element created by the factory class `DirectedReferenceUsage_Factory`.

##### General Classes

- `Factory` (from `Foundations`)
- `ToParameterMembership_Init` (from `KerMLInitializers`)

##### Association Ends

- `featureDirectionKind : FeatureDirectionKind [1]`

##### Operations

- `create (in featureDirectionKind : FeatureDirectionKind) : ParameterMembership [1]`
- `ownedMemberParameter () : Feature [1] {redefines ownedMemberParameter}`

```
DirectedReferenceUsage_Factory.create(featureDirectionKind)
```

#### 7.5.2.16 EmptyObjectiveMembership\_Factory

##### Description

Factory class to create an objective membership without a source in the SysML v1 model.

##### General Classes

- `Factory` (from `Foundations`)
- `ToObjectiveMembership_Init` (from `SystemInitializers`)

##### Operations

- `create () : ObjectiveMembership [1]`
- `ownedMemberFeature () : Feature [1] {redefines ownedMemberFeature}`

```
EmptyRequirementUsage_Factory.create()
```

#### 7.5.2.17 EmptyRequirementUsage\_Factory

##### Description

Factory class to create a requirement usage without a source in the SysML v1 model.

##### General Classes

- `Factory` (from `Foundations`)
- `ToRequirementUsage_Init` (from `SystemInitializers`)

## Operations

- `create () : RequirementUsage [1]`
- `ownedRelationship () : Relationship [0..*]` {redefines `ownedRelationship`}

```
Set {  
  EmptySubjectMembership_Factory.create(),  
  ReturnParameterFeatureMembership_Factory.create() }
```

### 7.5.2.18 EmptySubject\_Factory

#### Description

Factory class to create a reference usage representing a subject without a source in the SysML v1 model.

#### General Classes

- `Factory` (from `Foundations`)
- `ToReferenceUsage_Init` (from `SystemInitializers`)

#### Operations

- `create () : ReferenceUsage [1]`
- `direction () : FeatureDirectionKind [0..1]` {redefines `direction`}

```
KerML::FeatureDirectionKind::_in'
```

### 7.5.2.19 EmptySubjectMembership\_Factory

#### Description

Factory class to create a membership relationship for a reference usage representing a subject without a source in the SysML v1 model.

#### General Classes

- `Factory` (from `Foundations`)
- `ToSubjectMembership_Init` (from `SystemInitializers`)

#### Operations

- `create () : SubjectMembership [1]`
- `ownedMemberParameter () : Feature [1]` {redefines `ownedMemberParameter`}

```
EmptySubject_Factory.create()
```

### 7.5.2.20 FeatureTyping\_Factory

#### Description

Factory class to create a `FeatureTyping` relationship. The `create` parameter is set as the type.

#### General Classes

- Factory (from Foundations)
- ToFeatureTyping\_Init (from KerMLInitializers)

#### Association Ends

- type : NamedElement [1]

#### Operations

- create (in type : NamedElement) : FeatureTyping [1]
- type () : Type [1] {redefines type}

type

### 7.5.2.21 FlowEndParameterMembership\_Factory

#### Description

Factory class to create a ParameterMembership relationship for an end of a FlowUsage as a target element for a UML4SysML::InformationFlow that is realized by a UML4SysML::Connector.

#### General Classes

- Factory (from Foundations)
- ToParameterMembership\_Init (from KerMLInitializers)

#### Association Ends

- end : NamedElement [1]
- informationFlow : InformationFlow [1]

#### Operations

- create (in informationFlow : InformationFlow, in end : NamedElement) : ParameterMembership [1]
- ownedMemberParameter () : Feature [1] {redefines ownedMemberParameter}

```
InformationFlowEventOccurrenceUsage_Factory.create(informationFlow, end)
```

### 7.5.2.22 FlowItem\_Factory

#### Description

Factory class to create a ItemFeature element as a target element for the flowing entity specified by an UML4SysML::InformationFlow.

#### General Classes

- Factory (from Foundations)
- ToItemFeature\_Init (from SystemInitializers)

#### Association Ends

- item : NamedElement [1]

## Operations

- create (in item : NamedElement) : PayloadFeature [1]
- ownedRelationship () : Relationship [0..\*] {redefines ownedRelationship}

```
if item.ocIsKindOf(UML::Classifier) then
    Set{FeatureTyping_Factory.create(item)}
else if item.ocIsKindOf(UML::Property) then
    Set{ReferenceSubsetting_Factory.create(item)}
else
    Set{}
endif
endif
```

### 7.5.2.23 FlowItemFeatureMembership\_Factory

#### Description

Factory class to create a FeatureMembership relationship for an ItemFeature as a target element for the flowing entity specified by an UML4SysML::InformationFlow.

#### General Classes

- Factory (from Foundations)
- ToFeatureMembership\_Init (from KerMLInitializers)

#### Association Ends

- item : NamedElement [1]

## Operations

- create (in item : NamedElement) : FeatureMembership [1]
- ownedMemberFeature () : Feature [1] {redefines ownedMemberFeature}

```
FlowItem_Factory.create(item)
```

### 7.5.2.24 FlowUsage\_Factory

#### Description

Factory class to create a FlowUsage as a target element for a UML4SysML::InformationFlow that is realized by a UML4SysML::Connector. The factory class only supports UML4SysML::InformationFlows which have exactly one source and one target element, which is implicitly assured since connectors in SysML may only ever have two ends.

#### General Classes

- Factory (from Foundations)
- ToFlowUsage\_Init (from SystemInitializers)

#### Association Ends

- informationFlow : InformationFlow [1]

## Operations

- create (in informationFlow : InformationFlow) : FlowUsage [1]
- ownedRelationship () : Relationship [0..\*] {redefines ownedRelationship}

```
let relationships : Set(KerML::Relationship) =
  informationFlow.realizingConnector->collect(c|Subsetting_Factory.create(c))
  ->including(FeatureTyping_Factory.create(informationFlow))
  ->including(FlowEndParameterMembership_Factory.create(
    informationFlow,informationFlow.source.get(0)))
  ->including(FlowEndParameterMembership_Factory.create(
    informationFlow,informationFlow.target.get(0))) in
let itemProperty : UML::Property =
  if Helper.hasStereotypeApplied(informationFlow,
    'SysML::Ports&Flows::ItemFlow') then
    Helper.getTagValueAsElement(informationFlow,
      'SysML::Ports&Flows::ItemFlow', 'itemProperty')
  else
    invalid
  endif in

if itemProperty.oclIsUndefined() then
  relationships->union(informationFlow.conveyed->flatten()
    ->collect(i | FlowItemFeatureMembership_Factory.create(i)))
else
  relationships->including(
    FlowItemFeatureMembership_Factory.create(itemProperty))
endif
```

### 7.5.2.25 FlowUsageFeatureMembership\_Factory

#### Description

Factory class to create a FeatureMembership relationship for a FlowUsage as a target element for a UML4SysML::InformationFlow that is realized by a UML4SysML::Connector.

#### General Classes

- Factory (from Foundations)
- ToFeatureMembership\_Init (from KerMLInitializers)

#### Association Ends

- informationFlow : InformationFlow [1]

## Operations

- create (in informationFlow : InformationFlow) : FeatureMembership [1]
- ownedMemberFeature () : Feature [1] {redefines ownedMemberFeature}

```
FlowUsage_Factory.create(informationFlow)
```

### 7.5.2.26 InformationFlowEventOccurrenceUsage\_Factory

#### Description

## General Classes

- Factory (from Foundations)
- ToEventOccurenceUsage\_Init (from SystemInitializers)

## Association Ends

- end : NamedElement [1]
- informationFlow : InformationFlow [1]

## Operations

- create (in informationFlow : InformationFlow, in end : NamedElement) : EventOccurrenceUsage [1]
- ownedRelationship () : Relationship [0..\*] {redefines ownedRelationship}

```
Set{InformationFlowReferenceSubsetting_Factory.create(informationFlow, end)}
```

### 7.5.2.27 InformationFlowReferenceSubsetting\_Factory

#### Description

Factory class to create a ReferenceSubsetting relationship for an end of a FlowUsage subsetting the target element of an end element of an UML4SysML::InformationFlow.

## General Classes

- Factory (from Foundations)
- ToReferenceSubsetting\_Init (from KerMLInitializers)

## Association Ends

- end : NamedElement [1]
- informationFlow : InformationFlow [1]

## Operations

- create (in informationFlow : InformationFlow, in end : NamedElement) : ReferenceSubsetting [1]
- referencedFeature () : Feature [1] {redefines referencedFeature}

```
InformationFlowEnd_Mapping.getMapped(informationFlow, end)
```

### 7.5.2.28 LiteralBoolean\_Factory

#### Description

Factory class to create a LiteralBoolean element.

## General Classes

- Factory (from Foundations)
- ToExpression\_Init (from KerMLInitializers)

## Association Ends

- boolean : Boolean [1]

- to : LiteralBoolean [1]  
{redefines: ToExpression\_Init::to}

### Operations

- create (in boolean : Boolean) : LiteralBoolean [1]
- ownedRelationship () : Relationship [0..\*] {redefines ownedRelationship}

```
Set{ReturnParameterFeatureMembership_Factory.create() }
```

## 7.5.2.29 LiteralNull\_Factory

### Description

Factory class to create a LiteralNull element.

### General Classes

- Factory (from Foundations)
- ToExpression\_Init (from KerMLInitializers)

### Association Ends

- to : NullExpression [1]  
{redefines: ToExpression\_Init::to}

### Operations

- create () : NullExpression [1]
- ownedRelationship () : Relationship [0..\*] {redefines ownedRelationship}

```
Set{ReturnParameterFeatureMembership_Factory.create() }
```

## 7.5.2.30 LiteralRational\_Factory

### Description

Factory class to create a LiteralRational element.

### General Classes

- Factory (from Foundations)
- ToExpression\_Init (from KerMLInitializers)

### Association Ends

- real : Real [1]
- to : LiteralRational [1]  
{redefines: ToExpression\_Init::to}

### Operations

- create (in real : Real) : LiteralReal [1]
- ownedRelationship () : Relationship [0..\*] {redefines ownedRelationship}

```
Set{ReturnParameterFeatureMembership_Factory.create() }
```

### 7.5.2.31 LowerBound\_Factory

#### Description

#### General Classes

- Factory (from Foundations)

#### Association Ends

- multiplicityLowerBoundMembership : MultiplicityLowerBoundMembership\_Factory [1]
- to : LiteralInteger [1]  
{redefines: Initializer::to}

#### Operations

- create (in lowerValue : Integer) : LiteralInteger [1]
- ownedRelationship () : Relationship [0..\*]

```
Set{ReturnParameterFeatureMembership_Factory.create() }
```

- value () : Integer [1]

```
lowerValue
```

### 7.5.2.32 MultiplicityElement\_Factory

#### Description

#### General Classes

- Factory (from Foundations)
- ToFeature\_Init (from KerMLInitializers)

#### Association Ends

- lowerValue : Integer [1]
- multiplicityLowerBoundMembership : MultiplicityLowerBoundMembership\_Factory [1]
- multiplicityUpperBoundMembership : MultiplicityUpperBoundMembership\_Factory [1]
- upperValue : Integer [1]

#### Operations

- create (in lowerValue : Integer, in upperValue : Integer) : Feature [1]
- ownedRelationship () : Relationship [0..\*] {redefines ownedRelationship}

```
Set{self.multiplicityLowerBoundMembership, self.multiplicityUpperBoundMembership}
```

### 7.5.2.33 MultiplicityLowerBoundMembership\_Factory

#### Description

## General Classes

- Factory (from Foundations)
- ToFeatureMembership\_Init (from KerMLInitializers)

## Association Ends

- lowerBound : LowerBound\_Factory [1]
- multiplicityElement : MultiplicityElement\_Factory [1]

## Operations

- create () : FeatureMembership [1]
- ownedMemberFeature () : Feature [1] {redefines ownedMemberFeature}

```
self.lowerBound
```

### 7.5.2.34 MultiplicityMembership\_Factory

## Description

## General Classes

- Factory (from Foundations)
- ToFeatureMembership\_Init (from KerMLInitializers)

## Association Ends

- lowerValue : Integer [1]
- upperValue : Integer [1]

## Operations

- create (in lowerValue : Integer, in upperValue : Integer) : FeatureMembership [1]
- ownedMemberFeature () : Feature [1] {redefines ownedMemberFeature}

```
if upperValue = 1 then
  if lowerValue = 0 then
    Helper.getMultiplicityRangeByName('zeroOrOne')
  else if lowerValue = 1 then
    Helper.getMultiplicityRangeByName('exactlyOne')
  else
    MultiplicityElement_Factory.create(lowerValue, upperValue)
  endif endif
else if upperValue = -1 then
  if lowerValue = 0 then
    Helper.getMultiplicityRangeByName('zeroToMany')
  else if lowerValue = 1 then
    Helper.getMultiplicityRangeByName('oneToMany')
  else
    MultiplicityElement_Factory.create(lowerValue, upperValue)
  endif endif
else
  MultiplicityElement_Factory.create(lowerValue, upperValue)
endif endif
```

### 7.5.2.35 MultiplicityUpperBoundMembership\_Factory

#### Description

#### General Classes

- Factory (from Foundations)
- ToFeatureMembership\_Init (from KerMLInitializers)

#### Association Ends

- multiplicityElement : MultiplicityElement\_Factory [1]
- upperBound : UpperBound\_Factory [1]

#### Operations

- create (in upperValue : Integer) : FeatureMembership [1]

### 7.5.2.36 ObjectFlowItemFlowEndRedefinition\_Factory

#### Description

#### General Classes

- Factory (from Foundations)
- ToRedefinition\_Init (from KerMLInitializers)

#### Association Ends

- feature : Feature [1]

#### Operations

- create (in feature : Feature) : Redefinition [1]
- redefinedFeature () : Feature [1] {redefines redefinedFeature}

feature

### 7.5.2.37 ParameterMembership\_Factory

#### Description

Factory class to create a ParameterMembership relationship.

#### General Classes

- Factory (from Foundations)
- ToParameterMembership\_Init (from KerMLInitializers)

#### Operations

- create () : ParameterMembership [1]
- ownedMemberParameter () : Feature [1] {redefines ownedMemberParameter}

ReferenceUsage\_Factory.create()

### 7.5.2.38 ReferenceSubsetting\_Factory

#### Description

Factory class to create a ReferenceSubsetting relationship. The create parameter is set as the referenced feature.

#### General Classes

- Factory (from Foundations)
- ToReferenceSubsetting\_Init (from KerMLInitializers)

#### Association Ends

- property : Property [1]

#### Operations

- create (in property : Property) : ReferenceSubsetting [1]
- referencedFeature () : Feature [1] {redefines referencedFeature}

property

### 7.5.2.39 ReferenceUsage\_Factory

#### Description

Factory class to create a ReferenceUsage element with direction 'in'.

#### General Classes

- Factory (from Foundations)
- ToReferenceUsage\_Init (from SystemInitializers)

#### Operations

- create () : ReferenceUsage [1]
- direction () : FeatureDirectionKind [0..1] {redefines direction}

KerML::FeatureDirectionKind::\_in'

### 7.5.2.40 ReturnParameterFeature\_Factory

#### Description

Factory class to create a feature element with direction 'out' representing a return parameter.

#### General Classes

- Factory (from Foundations)
- ToFeature\_Init (from KerMLInitializers)

#### Operations

- create () : Feature [1]

- direction () : FeatureDirectionKind [0..1] {redefines direction}

```
KerML::FeatureDirectionKind::_out'
```

#### 7.5.2.41 ReturnParameterFeatureMembership\_Factory

##### Description

Factory class to create a feature membership relationship for a feature element with direction 'out' representing a return parameter.

##### General Classes

- Factory (from Foundations)
- ToReturnParameterMembership\_Init (from KerMLInitializers)

##### Operations

- create () : ReturnParameterMembership [1]
- ownedMemberParameter () : Feature [1] {redefines ownedMemberParameter}

```
ReturnParameterFeature_Factory.create()
```

#### 7.5.2.42 Subsetting\_Factory

##### Description

Factory class to create a Subsetting relationship. The create parameter is set as the subsetting feature.

##### General Classes

- Factory (from Foundations)
- ToSubsetting\_Init (from KerMLInitializers)

##### Association Ends

- subsetting : NamedElement [1]

##### Operations

- create (in subsetting : NamedElement) : Subsetting [1]
- subsettingFeature () : Feature [1] {redefines subsettingFeature}

```
subsetting
```

#### 7.5.2.43 UpperBound\_Factory

##### Description

##### General Classes

- Factory (from Foundations)

##### Association Ends

- multiplicityUpperBoundMembership : MultiplicityUpperBoundMembership\_Factory [1]
- to : LiteralInteger [1]  
  {redefines: Initializer::to}

## Operations

- create (in upperValue : Integer) : LiteralInteger [1]
- ownedRelationship () : Relationship [0..\*]

```
Set {ReturnParameterFeatureMembership_Factory.create () }
```

- value () : Integer [1]

```
upperValue
```

## 7.6 Generic Mappings

### 7.6.1 Overview

Generic mappings are partial definitions of transformation rules that are intended to factorize reusable algorithms for making the global specification more compact and easier to read and maintain. Basically, they provide a default value for all the non-derived attributes of their target metaclass wherever possible, or declare an abstract operation for them otherwise. They are similar to initializers, except that they have a source element defined. The operations provided by the generic mappings can be redefined by their specialization, as appropriate according to the source type specified by the redefinition of their *from* attribute.

All of these generic mappings are abstract.

### 7.6.2 Common Mappings

#### 7.6.2.1 CommonFeatureReferenceExpression\_Mapping

##### Description

Common mapping class for a feature reference expression.

##### General Mappings

ToFeatureReferenceExpression\_Init  
Mapping

##### Mapping Source

TypedElement

##### Mapping Target

FeatureReferenceExpression

##### Owned Mappings

(none)

##### Applicable filters

(none)

### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `FeatureReferenceExpression::ownedRelationship () : Relationship [0..*]`  
`Set { CommonMembership_Mapping.getMapped (from) ,`  
`CommonReturnParameterFeatureMembership_Mapping.getMapped (from) }`

#### 7.6.2.2 CommonMembership\_Mapping

##### Description

Creates a membership relationship for *memberElement()*.

##### General Mappings

ToMembership\_Init  
Mapping

##### Mapping Source

TypedElement

##### Mapping Target

Membership

##### Owned Mappings

(none)

##### Applicable filters

(none)

##### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `Membership::memberElement () : Element [1]`  
`from`

#### 7.6.2.3 CommonParameterReferenceUsageInMembership\_Mapping

##### Description

Creates a membership relationship for *memberElement()*.

##### General Mappings

ToParameterMembership\_Init  
Mapping

## Mapping Source

Element

## Mapping Target

ParameterMembership

## Owned Mappings

(none)

## Applicable filters

(none)

## Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- ParameterMembership::ownedMemberParameter () : Feature [1]  

```
if not from.ocIsKindOf(UML::TypedElement) then
    CommonParameterReferenceUsageIn_Mapping.getMapped(from)
else if from.ocIsType(UML::TypedElement).type.ocIsUndefined() then
    CommonParameterReferenceUsageIn_Mapping.getMapped(from)
else
    CommonParameterReferenceUsageInUntyped_Mapping.getMapped(from)
endif
endif
```

### 7.6.2.4 CommonParameterReferenceUsageIn\_Mapping

#### Description

Common mapping class that creates a parameter reference usage element with direction 'in' and with a type.

#### General Mappings

CommonParameterReferenceUsageInUntyped\_Mapping  
Mapping

## Mapping Source

Element

## Mapping Target

ReferenceUsage

## Owned Mappings

## 7.7 Mappings from UML4SysML metaclasses

### 7.7.1 Overview

UML4SysML is the subset of UML containing all model elements that are reused by SysML. The complete list of model elements is defined in [SysMLv1], subclause 4.1.

## 7.7.2 Actions

### 7.7.2.1 Overview

**Table 1. List of all mappings**

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
AcceptCallAction	AcceptActionUsage
AcceptEventAction	AcceptActionUsage
ActionInputPin	ReferenceUsage
AddStructuralFeatureValueAction	ActionUsage
AddVariableValueAction	ActionUsage
BroadcastSignalAction	ActionUsage
CallBehaviorAction	ActionUsage
CallOperationAction	ActionUsage
Clause	not mapped; see next section
ClearAssociationAction	ActionUsage
ClearStructuralFeatureAction	ActionUsage
ClearVariableAction	ActionUsage
ConditionalNode	Namespace ActionUsage
CreateLinkAction	ActionUsage

ValuePin	ReferenceUsage
ValueSpecificationAction	ActionUsage

### 7.7.2.2 UML4SysML::Actions elements not mapped

**Table 2. List of SysML v1 elements not mapped of this section**

SysML v1 Concept	Rationale
AcceptCallAction	Since the CallEvent is not supported by SysML v2, the AcceptCallAction is also not covered. It is mapped to an empty action usage to keep the connections within the activity respectively action definition.
ActionInputPin	The UML4SysML::ActionInputPin concept is not covered by SysML v2. The model element is mapped as a input or output pin, but without the special action input pin semantics.
Clause	Mapping is not specified yet.
ConditionalNode	Mapping is not specified yet.
LinkEndCreationData	Mapping is not specified yet.
LinkEndData	Mapping is not specified yet.
LinkEndDestructionData	Mapping is not specified yet.

SysML v1 Concept	Rationale
ReclassifyObjectAction	The UML4SysML::ReclassifyObjectAction is not supported by SysML v2. It is mapped to an empty action usage to keep the connections within the activity respectively action definition.
ReplyAction	The UML4SysML::ReplyAction is only used with UML4SysML::AcceptCallAction. Since we have no mapping of AcceptCallAction to SysML v2, there is also no mapping for ReplyAction. However, it is mapped to an empty action usage to keep the connections within the activity respectively action definition.
StartClassifierBehaviorAction	The UML4SysML::StartClassifierBehaviorAction is not supported by SysML v2. It is mapped to an empty action usage to keep the connections within the activity respectively action definition.
StartObjectBehaviorAction	The UML4SysML::StartObjectBehaviorAction is not supported by SysML v2. It is mapped to an empty action usage to keep the connections within the activity respectively action definition.
UnmarshallAction	Mapping is not specified yet.

### 7.7.2.3 Mapping Specifications

#### 7.7.2.3.1 Accept Event Actions

##### 7.7.2.3.1.1 AcceptCallAction\_Mapping

###### Description

Since the CallEvent is not supported by SysML v2, the AcceptCallAction is also not covered. It is mapped to an empty action usage to keep the connections within the activity respectively action definition.

###### Owned Mappings

(none)

###### Applicable filters

(none)

### 7.7.2.3.1.2 AcceptEventAction\_Mapping

#### Description

The UML4SysML::AcceptEventAction is mapped to a AcceptActionUsage element.

If the trigger is a signal, it is mapped to an accept parameter typed by the signal.

SysMLv2 does not support more than one trigger. Therefore only the first specified trigger of the action is transformed. All further triggers are ignored.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
action acceptEventActionSignalEvent1 accept : SysMLv1Signal via sysMLv1Port;
action acceptEventActionChangeEvent1 accept when when changeExpression.result {
    calc changeExpression {
        return : ScalarValues::Boolean;
        language "OCL"
        /*
        * x > 0
        */
    }
}
```

##### Applicable filters

(none)

##### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- ActionUsage::ownedRelationship () : Relationship [0..\*]

```
let actionInputPin: Set(UML::Element) =
    from.ownedElement->select(e | e.ocIsTypeOf(UML::ActionInputPin)) in
let triggers: Set(UML::Element) =
    from.ownedElement->select(e | e.ocIsKindOf(UML::Trigger)) in
let toElementFMS: Set(UML::Element) =
    from.ownedElement->select(e | e.ocIsKindOf(UML::Pin)) in
let toElementOMS: Set(UML::Element) =
    (((from.ownedElement-toElementFMS)-
    actionInputPin)-triggers)-from.ownedElement in
toElementOMS->collect(e | ElementOwningMembership_Mapping.getMapped(e))
->asSet()
->union(self.ocAsType(ElementMain_Mapping).ownedRelationship())
->union(toElementFMS
->collect(e | ElementFeatureMembership_Mapping.getMapped(e))->asSet())
```

- ActionUsage::isComposite () : Boolean [1]

true

#### 7.7.2.3.2.2 OpaqueAction\_Mapping

##### Description

The UML4SysML::OpaqueAction is mapped to a SysML v2 ActionUsage with a textual representation.

The following shows an example of the expected SysMLv2 textual syntax of a UML4SysML::OpaqueAction.

```
action thisIsAOpaqueAction {
  in x : ScalarValues::Integer;
  in y : ScalarValues::Integer;
  out result : ScalarValues::Boolean;

  language "OCL"
  /*
   * x = y + 1;
   */
}
```

else
  Helper.actionOwnedRelationship (from)
endif
```

#### 7.7.2.3.2.3 OABody\_Mapping

### Description

The languages and bodies of a UML4SysML::OpaqueAction are mapped to SysMLv2 TextualRepresentations.

### General Mappings

ToAnnotatingElement\_Init  
Mapping

#### Mapping Source

OpaqueAction

#### Mapping Target

TextualRepresentation

#### Owned Mappings

(none)

#### Applicable filters

(none)

#### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- TextualRepresentation::body () : String [1]  

```
if from.body.notEmpty() then from.body.first() else invalid endif
```
- TextualRepresentation::language () : String [1]  

```
if from.language.notEmpty() then from.language.first() else invalid endif
```

#### 7.7.2.3.2.4 OABodyMembership\_Mapping

##### Description

Creates a membership relationship for *memberElement()*.

##### General Mappings

ToOwningMembership\_Init  
Mapping

#### Mapping Source

OpaqueAction

#### Mapping Target

OwningMembership

#### Owned Mappings

(none)

#### Applicable filters

(none)

### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `OwningMembership::ownedMemberElement () : Element [1]`  
`OABody_Mapping.getMapped(from)`

#### 7.7.2.3.2.5 Pin\_Mapping

##### Description

Mapping class for model elements of kind `UML4SysML::Pin`. The operation `ownedRelationship()` makes a distinction between typed and untyped pins. The target element is a SysMLv2 `ReferenceUsage`.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
action def SysMLv1Activity {  
    action sysMLv1Action {  
        in sysMLv1InputPin : ScalarValues::Integer;  
        out sysMLv1UntypedOutputPin;  
    }  
}
```

##### General Mappings

`ToReferenceUsage_Init`  
`NamedElementMain_Mapping`

##### Mapping Source

`Pin`

##### Mapping Target

`ReferenceUsage`

##### Owned Mappings

(none)

##### Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
not Helper.excludedPin(src)
```

##### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `ReferenceUsage::direction () : FeatureDirectionKind [0..1]`

```
if from.ocIsTypeOf(UML::InputPin) then
    KerML::FeatureDirectionKind::_in'
else if from.ocIsTypeOf(UML::OutputPin) then
    KerML::FeatureDirectionKind::_out'
else
    invalid
endif endif
```

- `ReferenceUsage::ownedRelationship () : Relationship [0..*]`

```
self.ocAsType(ElementMain_Mapping).ownedRelationship()
->including(MultiplicityMembership_Mapping.getMapped(from))
```

### 7.7.2.3.2.6 ValuePin\_Mapping

#### Description

A `UML4SysML::ValuePin` is mapped to a SysML v2 `ReferenceUsage` with assigned value.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
action sysMLv1Action {
    in sysMLv1ValuePin1 : ScalarValues::Integer = 42;
    in sysMLv1ValuePin2 = {
        return result;
        language "English"
        /*
         * this is a opaque expression
         */
    }.result;
}
```

#### General Mappings

Pin\_Mapping

#### Mapping Source

ValuePin

#### Mapping Target

ReferenceUsage

#### Owned Mappings

(none)

#### Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
not Helper.excludedPin(src) and not src.type.oclIsUndefined()
```

## Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `ReferenceUsage::ownedRelationship () : Relationship [0..*]`  

```
Set{PinFeatureTyping_Mapping.getMapped(from),  
ValuePinFeatureValue_Mapping.getMapped(from),  
MultiplicityMembership_Mapping.getMapped(from)}
```

### 7.7.2.3.2.7 ValuePinFeatureValue\_Mapping

#### Description

The mapping class creates the value expression for the reference usage element.

#### General Mappings

## 7.7.3 Activities

### 7.7.3.1 Overview

**Table 3. List of all mappings**

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
Activity	ActionDefinition
ActivityFinalNode	TerminateActionUsage
ActivityParameterNode	not mapped; see next section
ActivityPartition	not mapped; see next section
CentralBufferNode	ActionUsage
ControlFlow	TransitionUsage SuccessionAsUsage
DataStoreNode	ActionUsage
DecisionNode	DecisionNode
ExceptionHandler	not mapped; see next section
FlowFinalNode	not mapped; see next section
ForkNode	ForkNode
InitialNode	not mapped; see next section
InterruptibleActivityRegion	not mapped; see next section
JoinNode	JoinNode
MergeNode	MergeNode
ObjectFlow	TransitionUsage SuccessionFlowUsage
Variable	ItemUsage AttributeUsage

### 7.7.3.2 UML4SysML::Activities elements not mapped

**Table 4. List of SysML v1 elements not mapped of this section**

SysML v1 Concept	Rationale
ActivityFinalNode	Mapping is not specified yet.
ActivityParameterNode	The parameter of the activity is mapped from SysML v1 to SysML v2. The additional concept of the activity parameter node is necessary for the token semantic of SysML v1 activities, which is not part of SysML v2. Therefore, the additional concept of the activity parameter node is not mapped to SysML v2.
ActivityPartition	Mapping is not specified yet.
ExceptionHandler	Mapping is not specified yet.
InterruptibleActivityRegion	Mapping is not specified yet.

### 7.7.3.3 Mapping Specifications

#### 7.7.3.3.1 ActivityAsDefinition\_Mapping

##### Description

A UML4SysML::Activity is mapped to a SysMLv2 ActionDefinition.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
action def SysMLv1Activity {  
  in parIn : SysMLv1Block;  
  out parOut;  
  out parReturn;  
}  
part def SysMLv1Block;
```

#### Applicable filters

(none)

### 7.7.3.3.33 DecisionNode\_Mapping

#### Description

The UML4SysML::DecisionNode is mapped to a SysMLv2 DecisionNode.

There is no suitable element in SysML v2 for the else condition of an outgoing UML4SysML::ActivityEdge. Therefore, it is mapped to a TextualRepresentation with language "SysML v1" and body "else" (see ExpressionElse\_Mapping class).

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```

action def SysMLv1Activity {
  action sysMLv1Action1;
  succession sysMLv1ControlFlow1 first sysMLv1Action1 then sysMLv1DecisionNode;
  decide sysMLv1DecisionNode;
  succession sysMLv1ControlFlow2 first sysMLv1DecisionNode if {
    return : ScalarValues::Boolean;
    // guard expression, for example, opaque expression
  }.result then sysMLv1Action2;
  succession flow2 first sysMLv1DecisionNode if {
    return : ScalarValues::Boolean;
    language "SysMLv1"
    /*
     * else
     */
  }.result then sysMLv1Action2;
  action sysMLv1Action2;
}

```

### 7.7.3.35 ForkNode\_Mapping

#### Description

A UML4SysML::ForkNode is mapped to a SysMLv2 ForkNode. If object flows are connected with the UML4SysML::ForkNode, corresponding input and output parameters are created to transfer the objects through the ForkNode.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
action def SysMLv1Activity {  
  succession cf1 first sysMLv1Action1 then sysMLv1ForkNodeA;  
  succession cf2 first sysMLv1Action2 then sysMLv1ForkNodeA;  
  succession cf3 first sysMLv1ForkNodeA then sysMLv1Action4;

`Set{ChangeTriggerReturnReferenceSubsetting_Mapping.getMapped(from) }`

- ReferenceUsage::isEnd () : Boolean [1]

true

### 7.7.5.3.28 OpaqueBehavior\_Mapping

#### Description

A UML4SysML::OpaqueBehavior is mapped to a SysML v2 ActionDefinition.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
action def SysMLv1OpaqueBehavior {
    language "Built-in Math"
    /*
     * result = 42 + 23;
     */
}
```

#### General Mappings

Behavior\_Mapping

#### Mapping Source

OpaqueBehavior

#### Mapping Target

ActionDefinition

#### Owned Mappings

(none)

#### Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
src.owner.ocIsKindOf(UML::Package)
```

#### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- ActionDefinition::ownedRelationship () : Relationship [0..\*]

```
let parameters : Set(UML::Parameter) =
    from.ownedElement->select(e | e.ocIsKindOf(UML::Parameter)) in
let parameterSets : Set(UML::ParameterSet) =
    from.ownedElement->select(e | e.ocIsKindOf(UML::ParameterSet)) in
let features : Set(UML::Property) =
    from.ownedElement->select(e | e.ocIsKindOf(UML::Property)) in
let elementsOMS : Set(UML::Element) =
```

```

        (((from.ownedElement - parameters) - parameterSets) - features) in
elementsOMS->collect(e | ElementOwningMembership_Mapping.getMapped(e))
->union(features->collect(e | PropertyMembership_Mapping.getMapped(e)))
->union(parameters->collect(e | ParameterMembership_Mapping.getMapped(e)))
->union(parameterSets->collect(e | ParameterSetMembership_Mapping.getMapped(e)))
->union(from.language
->collect(1 | OpaqueBehaviorMembership_Mapping.getMapped(from, 1)))

```

### 7.7.5.3.29 OpaqueBehaviorMembership\_Mapping

#### Description

Creates a membership relationship for *memberElement()*.

#### General Mappings

ToOwningMembership\_Init  
Mapping

#### Mapping Source

OpaqueBehavior

#### Mapping Target

OwningMembership with qualifier: language:String

#### Owned Mappings

(none)

#### Applicable filters

## 7.7.6.2 Mapping Specifications

### 7.7.6.2.1 Abstraction\_Mapping

#### Description

A UML4SysML::Abstraction relationship is mapped to a SysML v2 Dependency relationship.

#### General Mappings

Dependency\_Mapping

#### Mapping Source

Abstraction

#### Mapping Target

Dependency

#### Owned Mappings

(none)

#### Applicable filters

(none)

### 7.7.6.2.2 Comment\_Mapping

#### Description

A UML4SysML::Comment is mapped to a SysML v2 Comment.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
part def SysMLv1Block1;
part def SysMLv1Block2;
action def SysMLv1Activity {
    comment about SysMLv1Activity, SysMLv1Block1
    /* comment body */
}
comment about SysMLv1Block1, SysMLv1Block /* comment body */
```

#### General Mappings

ElementMain\_Mapping  
ToAnnotatingElement\_Init

#### Mapping Source

Comment

### Mapping Target

Comment

### Owned Mappings

(none)

### Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
not Helper.hasStereotypeApplied(src, 'SysML::ModelElements::ElementGroup')
```

### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `Comment::ownedRelationship () : Relationship [0..*]`  

```
self.oclAsType(ElementMain_Mapping).ownedRelationship()  
->union(self.annotation()->asSet())
```
- `Comment::annotation () : Annotation [0..*]`  

```
from.annotatedElement  
->collect(e | CommentAnnotation_Mapping.getMapped(from, e))
```
- `Comment::body () : String [1]`  

```
if from.body->isEmpty() then '' else from.body endif
```

## 7.7.6.2.3 CommentAnnotation\_Mapping

### Description

The mapping class creates the annotation relationship for the UML4SysML::Comment mapping.

### General Mappings

ToAnnotation\_Init  
Mapping

### Mapping Source

Comment

### Mapping Target

Annotation with qualifier: annotatedElement:Element

### Owned Mappings

(none)

### Applicable filters

(none)

### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `Annotation::owningAnnotatedElement () : Element [0..1]`  
`null`
- `Annotation::annotatedElement (in annotatedElement : Element) : Element [1]`  
`ElementMain_Mapping.getMapped(annotatedElement)`
- `Annotation::annotatingElement () : AnnotatingElement [1]`  
`Comment_Mapping.getMapped(from)`

#### 7.7.6.2.4 CommentOwnership\_Mapping

### Description

That mapping class creates an ownership relation that is convenient for a Comment. In SysMLv1/UML can be owned by any kind of element, including some that are not translated to SysMLv2 Namespaces.

### General Mappings

ToAnnotation\_Init  
UniqueMapping

### Mapping Source

Comment

### Mapping Target

Annotation

### Owned Mappings

(none)

### Applicable filters

(none)

### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `Annotation::annotatedElement () : Element [1]`  
`ElementMain_Mapping.getMapped(from.owner)`

- `Annotation::ownedRelatedElement () : Element [0..*]`  
`Set{self.annotatingElement () }`
- `Annotation::annotatingElement () : AnnotatingElement [1]`  
`Comment_Mapping.getMapped (from)`

#### 7.7.6.2.5 Constraint\_Mapping

##### Description

A `UML4SysML::Constraint` is mapped to a SysML v2 `ConstraintDefinition` and `AssertConstraintUsages` for the constrained elements.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
part def SysMLv1Block {
    constraint def SysMLv1Constraint {
        calc sysMLv1Constraint {
            language "English"
            /*
             * constraint specification
             */
        }
    }
    assert constraint assert_sysMLv1Constraint : SysMLv1Constraint;
}
```

## 7.7.9 Packages

### 7.7.9.1 Overview

**Table 12. List of all mappings**

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
Extension	ConnectionDefinition
ExtensionEnd	OccurrenceUsage Feature ReferenceUsage AttributeUsage
Image	not mapped; see next section
Model	Package
Package	Package
PackageMerge	not mapped; see next section
Profile	Package
ProfileApplication	not mapped; see next section
Stereotype	MetadataDefinition

### 7.7.9.2 UML4SysML::Packages elements not mapped

**Table 13. List of SysML v1 elements not mapped of this section**

SysML v1 Concept	Rationale
Extension	The mapping of the extension relationship is performed in the context of Stereotype_Mapping.
ExtensionEnd	The mapping of the extension end property is performed in the context of Stereotype_Mapping.
Image	Mapping is not specified yet.
PackageMerge	The concept of the PackageMerge relationship is not supported by SysML v2.

### 7.7.9.3 Mapping Specifications

#### 7.7.9.3.1 ElementImport\_Mapping

##### Description

A UML4SysML::ElementImport is mapped to a SysMLv2 MembershipImport. The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
package SysMLv1Package1 {
    import SysMLv1Package2::SysMLv1Block;
    import SysMLv1Package2::SysMLv1ValueType;
}
package SysMLv1Package2 {
    part def SysMLv1Block;
    attribute def SysMLv1ValueType;
}
```

##### General Mappings

ToMembershipImport\_Init  
NamedElementMain\_Mapping

##### Mapping Source

ElementImport

##### Mapping Target

MembershipImport

##### Owned Mappings

(none)

##### Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
if src.oclIsKindOf(UML::ElementImport) then
    Helper.hasMainMapping(src.oclAsType(UML::ElementImport).importedElement)
else
    false
endif
```

##### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- MembershipImport::importedMembership () : Namespace [1]  
`ElementOwningMembership_Mapping.getMapped(from.importedElement)`
- MembershipImport::importedMemberName () : String [0..1]  
`from.alias`

- MembershipImport::visibility () : VisibilityKind [1]

```
Helper.getKerMLVisibilityKind(from.visibility)
```

### 7.7.9.3.2 Model\_Mapping

#### Description

SysMLv2 has no explicit model element for a model. The UML4SysML::Model element is mapped to a SysMLv2 Package. The property "viewpoint" is mapped to a metadata defined in the SysML v1 library. The expected SysML v2 textual notation of a UML4SysML::Model with URI and viewpoint is as follows. If URI or viewpoint are not set in the source model, the metadata is not generated.

```
package SysMLv1Model {
  @SysMLv1Library::PackageData {URI="https://omg.org";}
  @SysMLv1Library::ModelData {'viewpoint'="The viewpoint of the model element.";}
}
```

#### General Mappings

    from.ownedElement->select(e | e.ocIsKindOf(UML::Region))->asSet() in
let toElementOMS : Set(UML::Element) =
    from.ownedElement - toFeatureMS in
toElementOMS
->collect(e | ElementOwningMembership_Mapping.getMapped(e))->asSet()
->union(toFeatureMS
->collect(e | ElementFeatureMembership_Mapping.getMapped(e))->asSet())
->union(self.ocAsType(ElementMain_Mapping).ownedRelationship())
```

### 7.7.11.2.3 ConnectionPointReference\_Mapping

#### Description

A UML4SysML::ConnectionPointReference element is mapped to a SysML v2 StateUsage.

## General Mappings

Namespace\_Mapping

ToStateUsage\_Init

## Mapping Source

ConnectionPointReference

## Mapping Target

StateUsage

## Owned Mappings

(none)

#### Applicable filters

(none)

#### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- StateUsage::isComposite () : Boolean [1]

false

- StateUsage::ownedRelationship () : Relationship [0..\*]

```
let toFeatureMS : Set(UML::Element) =
  from.ownedElement->select(e | e.ocIsKindOf(UML::Region)) in
let toElementOMS : Set(UML::Element) =
  (from.ownedElement - toFeatureMS) - from.ownedComment in
toElementOMS->collect(e | ElementOwningMembership_Mapping.getMapped(e))
->asSet()
->union(toFeatureMS
  ->collect(e | ElementFeatureMembership_Mapping.getMapped(e))->asSet())
->union(self.oclAsType(ElementMain_Mapping).ownedRelationship())
```

#### 7.7.11.2.4 DoBehaviorStateSubactionMembership\_Mapping

##### Description

Creates a state subaction membership relationship for *memberFeature()*.

##### General Mappings

StateBehaviorStateSubactionMembership\_Mapping

##### Mapping Source

Behavior

##### Mapping Target

StateSubactionMembership

##### Owned Mappings

(none)

#### Applicable filters

(none)

#### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- StateSubactionMembership::kind () : StateSubactionKind [1]

SysMLv2::SubactionKind::do

#### 7.7.11.2.5 EntryBehaviorStateSubactionMembership\_Mapping

##### Description

Creates a state subaction membership relationship for *memberFeature()*.

##### General Mappings

StateBehaviorStateSubactionMembership\_Mapping

##### Mapping Source

Behavior

##### Mapping Target

StateSubactionMembership

##### Owned Mappings

(none)

##### Applicable filters

(none)

##### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- StateSubactionMembership::kind () : StateSubactionKind [1]

SysMLv2::SubactionKind::entry

#### 7.7.11.2.6 ExitBehaviorStateSubactionMembership\_Mapping

##### Description

Creates a state subaction membership relationship for *memberFeature()*.

##### General Mappings

StateBehaviorStateSubactionMembership\_Mapping

##### Mapping Source

Behavior

##### Mapping Target

### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- StateSubactionMembership::kind () : StateSubactionKind [1]  
`SysMLv2::SubactionKind::exit`

#### 7.7.11.2.7 FinalState\_Mapping

##### Description

A UML4SysML::FinalState is mapped to a SysML v2 StateUsage. The details of the mapping are not defined yet.

##### General Mappings

State\_Mapping

##### Mapping Source

FinalState

##### Mapping Target

StateUsage

##### Owned Mappings

(none)

##### Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
src.ocIsTypeOf(UML::FinalState)
```

##### Mapping rules

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

#### 7.7.11.2.8 InitialState\_Mapping

##### Description

The mapping class maps a Pseudostate with kind = initial to a SysML v2 ActionUsage.

## General Mappings

CommonPseudostate\_Mapping

## Mapping Source

Pseudostate

## Mapping Target

ActionUsage

## Owned Mappings

(none)

## Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
(src.kind = PseudostateKind::initial)
```

## Mapping rules

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

### 7.7.11.2.9 InitialStateSubactionMembership\_Mapping

## Description

Creates a StateSubactionMembership relationship.

## General Mappings

ToStateSubactionMembership\_Init  
Mapping

## Mapping Source

Pseudostate

## Mapping Target

StateSubactionMembership

## Owned Mappings

Port	PortUsage OccurrenceUsage Feature AttributeUsage

### 7.7.12.2 Mapping Specifications

#### 7.7.12.2.1 AssociationClass\_Mapping

##### Description

A UML4SysML::AssociationClass is mapped to a SysML v2 ConnectionDefinition. The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```

part def SysMLv1Block1;
part def SysMLv1Block2;
connection def SysMLv1AssociationBlock {
    end : SysMLv1Block1;
    end : SysMLv1Block2;
}

```

##### General Mappings

AssociationCommon\_Mapping

##### Mapping Source

AssociationClass

##### Mapping Target

ConnectionDefinition

## Owned Mappings

(none)

## Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
not Helper.hasStereotypeApplied(src, 'SysML::Blocks::Block')
```

## Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- ConnectionDefinition::ownedRelationship () : Relationship [0..\*]

```
let nonOwnedEnds: OrderedSet(UML::Property) =  
    (from.memberEnd-from.ownedEnd)->asOrderedSet() in  
let generalizations : Set(UML::Generalization) =  
    from.ownedElement->select(e | e.ocIsKindOf(UML::Generalization)) in  
let others: OrderedSet(UML::Element) =  
    ((from.ownedElement-from.memberEnd)-generalizations)->asOrderedSet() in  
nonOwnedEnds->collect(e | NonOwnedEndMembership_Mapping.getMapped(e))  
->union(from.ownedEnd->collect(e | OwnedEndMembership_Mapping.getMapped(e)))  
->union(generalizations->collect(e | Generalization_Mapping.getMapped(e)))  
->union(others->collect(e | ElementOwningMembership_Mapping.getMapped(e)))  
->asOrderedSet()
```

### 7.7.12.2.2 AssociationCommon\_Mapping

#### Description

A UML4SysML::Association is mapped to a SysML v2 ConnectionDefinition. This is the abstract base class of all concrete association mapping classes.

#### General Mappings

Classifier\_Mapping

### 7.7.13.3.4 UseCase\_Mapping

#### Description

A UML4SysML::UseCase is mapped to a SysML v2 UseCaseDefinition. The expected SysML v2 textual syntax of a mapped UML4SysML::UseCase with a defined subject is as follows.

```
use case def SysMLv1UseCase {
  subject subject_SysMLv1Block : SysMLv1Block;
}
part def SysMLv1Block;
```

Currently, only one use case subject is supported by the mapping class. Since the UML4SysML::Extend relationship is not considered by the SysML v1 to SysML v2 transformation, the extension points of a use case are also not mapped.

`if from.language->size() = 0 then invalid else from.language.get(0) endif`
- `TextualRepresentation::body () : String [1]`  
`if from.body->size() = 0 then invalid else from.body.get(0) endif`

### 7.7.14.3.32 TimeExpression\_Mapping

#### Description

A `UML4SysML::TimeExpression` is mapped to a SysML v2 Expression. The details of the mapping are not specified yet.

#### General Mappings

ValueSpecification\_Mapping

#### Mapping Source

TimeExpression

#### Mapping Target

Expression

#### Owned Mappings

(none)

#### Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
not src.owner.ocIsKindOf(UML::TimeEvent)
```

#### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `Expression::ownedRelationship () : Relationship [0..*]`  

```
let ownedComments : Set(KerML::Relationship) =
  from.ownedComment->reject(c | c.annotatedElement->includes(from))
  ->collect(c| CommentOwnership_Mapping.getMapped(c))->asSet() in
let expression : Set(KerML::Relationship) = if from.expr.ocIsUndefined() then
  Set{}
else
  Set{ElementOwningMembership_Mapping.getMapped(from.expr)}
endif in
(if from.type.ocIsUndefined() then
  Set{CommonReturnParameterFeatureMembership_Mapping.getMapped(from)}
else
```

```

        Set{LiteralSpecificationTyping_Mapping.getMapped(from),
          CommonReturnParameterFeatureMembership_Mapping.getMapped(from)}
      endif)
    ->union(ownedComments)
    ->union(expression)

```

### 7.7.14.3.33 ValueSpecification\_Mapping

#### Description

The mapping class is the abstract base class of all mapping classes for special value specifications.

#### General Mappings

NamedElementMain\_Mapping  
ToExpression\_Init

#### Mapping Source

ValueSpecification

#### Mapping Target

Expression

#### Owned Mappings

(none)

#### Applicable filters

(none)

#### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Expression::ownedRelationship () : Relationship [0..\*]  

```

      (if from.type.ocIsUndefined() then
        Set{CommonReturnParameterFeatureMembership_Mapping.getMapped(from)}
      else
        Set{LiteralSpecificationTyping_Mapping.getMapped(from),
          CommonReturnParameterFeatureMembership_Mapping.getMapped(from)}
      endif) ->union(self.ocIsType(ElementMain_Mapping).ownedRelationship())

```

## 7.8 Mappings from SysML v1.7 stereotypes

### 7.8.1 Overview

The following subclauses of Mappings from SysML v1.7 stereotypes are organized according to the main packages of SysML v1.

## 7.8.2 Activities

### 7.8.2.1 Overview

**Table 21. List of all mappings**

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
Continuous	MetadataUsage
ControlOperator	
Discrete	MetadataUsage
NoBuffer	
Optional	
Overwrite	
Probability	MetadataUsage
Rate	MetadataUsage

### 7.8.2.2 SysML::Activities elements not mapped

**Table 22. List of SysML v1 elements not mapped of this section**

SysML v1 Concept	Rationale
ControlOperator	The concept that an action can control other actions is not supported by SysML v2.
NoBuffer	Mapping is not specified yet.
Optional	The stereotype states that the lower multiplicity of the parameter is 0. Since the multiplicity of the parameter is transformed, the additional statement that the parameter is optional is redundant. Therefore, the stereotype is not considered in the transformation.
Overwrite	Mapping is not specified yet.

### 7.8.2.3 Mapping Specifications

#### 7.8.2.3.1 ProbabilityMetadataUsage\_Mapping

##### Description

A SysML::Activities::Probability is mapped to a SysML v2 MetadataUsage owned by the appropriate target element of the UML4SysML::ActivityEdge or UML4SysML::ParameterSet.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
action def SysMLv1Activity {
    action sysMLv1Action1;
    succession sysMLv1ControlFlow1 first sysMLv1Action1 then sysMLv1Action2 {
        @SysMLv1Library::ProbabilityData {probability = 0.42;}
    }
    action sysMLv1Action2;
}
```

##### General Mappings

```
Helper.hasStereotypeApplied(src, 'SysML::Activities::Probability')
```

#### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- OwningMembership::ownedMemberElement () : Element [1]  
`ProbabilityMetadataUsage_Mapping.getMapped(from)`

### 7.8.2.3.8 RateMetadataUsage\_Mapping

#### Description

A SysML::Activities::Rate and the specializations SysML::Activities::Discrete and SysML::Activities::Continuous are mapped to a SysML v2 MetadataUsage owned by the appropriate target element of the UML4SysML::ActivityEdge or UML4SysML::Parameter.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
succession flow sysMLv1ObjectFlow of SysMLv1Block
  from sysMLv1Action1.outputValue to sysMLv1Action1.inputValue {
    @SysMLv1Library::RateData {isDiscrete = true;}
  }
```

The mapping of the rate instance value is not supported yet.

AllocateActivityPartition	Mapping is not specified yet.

### 7.8.3.3 Mapping Specifications

#### 7.8.3.3.1 Allocation\_Mapping

##### Description

A `SysML::Allocations::Allocate` is mapped to a SysML v2 `AllocationDefinition` if it is an allocation between definition elements.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
action def SysMLv1Activity {
    action sysMLv1Action;
}
part def SysMLv1Block {
    part sysMLv1PartProperty : AnotherSysMLv1Block;
}
part def AnotherSysMLv1Block;

// Allocation of definition
allocation def SysMLv1Allocation {
    end :>> source : SysMLv1Activity;
    end :>> target : SysMLv1Block;
```

```

}

// Allocation of usage
allocation def {
    end :>> source : SysMLv1Activity;
    end :>> target : SysMLv1Block;
    allocate source.sysMLv1Action to target.sysMLv1PartProperty;
}

// Allocation of usage to definition
allocation def {
    end :>> source : SysMLv1Activity;
    end :>> target : SysMLv1Block;
    allocate source.sysMLv1Action to target;
}

```

## 7.8.4 Blocks

### 7.8.4.1 Overview

Table 25. List of all mappings

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
AdjunctProperty	
BindingConnector	BindingConnectorAsUsage

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
Block	PartDefinition PartDefinition
BoundReference	
ClassifierBehaviorProperty	
ConnectorProperty	
DistributedProperty	
EndPathMultiplicity	
NestedConnectorEnd	
ParticipantProperty	
PropertySpecificType	
ValueType	AttributeDefinition

#### 7.8.4.2 SysML::Blocks elements not mapped

**Table 26. List of SysML v1 elements not mapped of this section**

SysML v1 Concept	Rationale
AdjunctProperty	The concept of adjunct properties is not needed in SysML v2, where the principal of the adjunct property can be used directly in the appropriate place.
BoundReference	Mapping is not specified yet.
ClassifierBehaviorProperty	The classifier behavior is already mapped to a property which also plays the role of the classifier behavior property. Therefore, there is no explicit mapping of a classifier behavior property.
ConnectorProperty	The connector property is a special case of an adjunct property and is not mapped, just like the adjunct property.
DirectedRelationshipPropertyPath	The stereotype is abstract is therefore not mapped. The concept of the DirectedRelationshipPropertyPath is included in the SysML v2 language.
DistributedProperty	Mapping is not specified yet.
ElementPropertyPath	The stereotype is abstract is therefore not mapped. The concept of the ElementPropertyPath is included in the SysML v2 language.
EndPathMultiplicity	Mapping is not specified yet.
NestedConnectorEnd	The concept of NestedConnectorEnd is already included in the SysML v2 language. It is not required to do an explicit mapping.
ParticipantProperty	Mapping is not specified yet.
PropertySpecificType	Mapping is not specified yet.

### 7.8.4.3 Mapping Specifications

#### 7.8.4.3.1 AssociationBlock\_Mapping

##### Description

An AssociationBlock is mapped to a SysML v2 ConnectionDefinition.

The SysML::Blocks::ParticipantProperties transformation is not defined yet. Therefore, the mapping is currently identical with the mapping of UML4SysML::AssociationClass.

##### General Mappings

AssociationClass\_Mapping

##### Mapping Source

AssociationClass

##### Mapping Target

ConnectionDefinition

##### Owned Mappings

(none)

##### Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
Helper.hasStereotypeApplied(src, 'SysML::Blocks::Block')
```

##### Mapping rules

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

#### 7.8.4.3.2 BindingConnector\_Mapping

##### Description

A SysML::Blocks::BindingConnector is mapped to a SysML v2 BindingConnectorAsUsage.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
part def SysMLv1Block1 {
    part sysMLv1PartProperty1 : SysMLv1Block2;
    part sysMLv1PartProperty2 : SysMLv1Block2;

    binding sysMLv1BindingConnector
        bind sysMLv1PartProperty1 = sysMLv1PartProperty2;
}
part def SysMLv1Block2;
```

##### General Mappings

Connector\_Mapping

#### Mapping Source

Connector

#### Mapping Target

BindingConnectorAsUsage

#### Owned Mappings

(none)

#### Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
Helper.hasStereotypeApplied(src, 'SysML::Blocks::BindingConnector')
```

#### Mapping rules

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

### 7.8.4.3.3 Block\_Mapping

#### Description

A SysML::Blocks::Block is mapped to a SysML v2 PartDefinition.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
part definition SysMLv1Block;
```

#### General Mappings

Class\_Mapping

#### Mapping Source

Class

#### Mapping Target

PartDefinition

#### Owned Mappings

(none)

#### Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```

not src.oclIsTypeOf (UML::AssociationClass)
  and Helper.hasStereotypeApplied(src, 'SysML::Blocks::Block')
  and not Helper.hasStereotypeApplied(src, 'SysML::ConstraintBlocks::ConstraintBlock')
  and not Helper.hasStereotypeApplied(src, 'SysML::Ports&Flows::InterfaceBlock')

```

## Mapping rules

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

### 7.8.4.3.4 EncapsulatedBlock\_Mapping

#### Description

A SysML::Block with *isEncapsulated=true* is mapped to a SysML v2 PartDefinition, and, additionally, gets a metadata feature defined by the SysML v1 library which represents the SysML v1 isEncapsulated property.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```

part def SysMLv1EncapsulatedBlock {
  @SysMLv1Library::BlockData {isEncapsulated = true;}
}

```

## General Mappings

```
SysML2::AttributeUsage.allInstances()  
->any(m | m.qualifiedName = 'SysMLv1Library::BlockData::isEncapsulated')
```

#### 7.8.4.3.12 FlowPropertyPart\_Mapping

##### Description

A `UML4SysML::Property` which is typed by a block and to which the SysML v1 stereotype `FlowProperty` has been applied is mapped as in the general mapping class `PartProperty_Mapping` but the target feature is always referential and the flow direction specified in the stereotype `FlowProperty` is considered.

##### General Mappings

PartProperty\_Mapping

## Mapping Source

Property

## Mapping Target

PartUsage

## Owned Mappings

(none)

## Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```

endif
```

### Mapping rules

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

#### 7.8.4.3.14 Model Libraries

##### 7.8.4.3.14.1 PrimitiveValueTypes

The SysML v1 model library PrimitiveValueTypes contains primitive types that are mapped to the appropriate scalar values in SysML v2.

###### 7.8.4.3.14.1.1 Boolean

The SysML v1 primitive type Boolean is mapped to the SysML v2 ScalarValues::Boolean element.

###### 7.8.4.3.14.1.2 Complex

The SysML v1 primitive type Complex is mapped to the SysML v2 ScalarValues::Complex element.

###### 7.8.4.3.14.1.3 Integer

The SysML v1 primitive type Integer is mapped to the SysML v2 ScalarValues::Integer element.

###### 7.8.4.3.14.1.4 Number

The SysML v1 primitive type Number is abstract. Therefore, no mapping is defined for it.

#### 7.8.4.3.14.1.5 Real

The SysML v1 primitive type Real is mapped to the SysML v2 ScalarValues::Real element.

#### 7.8.4.3.14.1.6 String

The SysML v1 primitive type String is mapped to the SysML v2 ScalarValues::String element.

#### 7.8.4.3.14.2 UnitAndQuantityKind

The SysML v1 model library UnitAndQuantityKind contains the blocks Unit and QuantityKind.

##### 7.8.4.3.14.2.1 QuantityKind

The mapping of the SysML v1 QuantityKind element is not specified yet.

##### 7.8.4.3.14.2.2 Unit

The mapping of the SysML v1 QuantityKind element is not specified yet.

#### 7.8.4.3.15 ValueType\_Mapping

##### Description

A SysML::Blocks::ValueType is mapped to a SysML v2 AttributeDefinition.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
attribute definition SysMLv1ValueType;
```

##### General Mappings

ItemFlow	

SysML v1 Abstract Syntax/Stereotype	SysML v2 Abstract Syntax
ProxyPort	
TriggerOnNestedPort	
~InterfaceBlock	PortDefinition

### 7.8.7.2 SysML::Ports&Flows elements not mapped

**Table 31. List of SysML v1 elements not mapped of this section**

SysML v1 Concept	Rationale
AddFlowPropertyValueOnNestedPortAction	Mapping is not specified yet.
ChangeStructuralFeatureEvent	Mapping is not specified yet.
InvocationOnNestedPortAction	Mapping is not specified yet.
TriggerOnNestedPort	Mapping is not specified yet.

### 7.8.7.3 Mapping Specifications

#### 7.8.7.3.1 AcceptChangeStructuralFeatureEventAction\_Mapping

##### Description

The SysML::PortsAndFlows::AcceptChangeStructuralFeatureEventAction element is mapped to SysML v2 AcceptActionUsage. The details of the mapping are not defined yet.

##### General Mappings

AcceptEventAction\_Mapping

##### Mapping Source

AcceptEventAction

##### Mapping Target

AcceptActionUsage

##### Owned Mappings

(none)

##### Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
Helper.hasStereotypeApplied(src,
'SysML::Ports&Flows::AcceptChangeStructuralFeatureEventAction')
```

##### Mapping rules

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

### 7.8.7.3.2 CommonFullPort\_Mapping

#### Description

The abstract mapping class is the base class of the mapping classes for the SysML::Ports&Flows::FullPort mappings.

#### General Mappings

PropertyCommon\_Mapping

#### Mapping Source

Port

#### Mapping Target

PartUsage

#### Owned Mappings

(none)

#### Applicable filters

#### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- PartUsage::ownedRelationship () : Relationship [0..\*]

```
let typings: Set(KerML::FeatureTyping) = if from.type.ocIsUndefined() then
  Set{}
else
  Set{StructuralFeatureToFeatureTyping_Mapping.getMapped(from)}
endif in
let subsettings: Set(KerML::Subsetting) = from.subsettedProperty
->collect(p | PropertySubsetting_Mapping.getMapped(from, p))->asSet() in
let defaultValue: Set(KerML::OwningMembership) =
if from.defaultValue.ocIsUndefined() then
  Set{}
else
  Set{DefaultValue_Mapping.getMapped(from)}
endif in
typings->union(subsettings)->union(defaultValue)
->including(MultiplicityMembership_Mapping.getMapped(from))->asSet()
->including(FullPortMetadataOwningMembership_Mapping.getMapped(from))
```

### 7.8.7.3.3 ConjugatedPortDefinition\_Mapping

#### Description

A SysML::Ports&Flows::InterfaceBlock element is mapped to a SysML v2 ConjugatedPortDefinition owned by the PortDefinition that is the target element of the main mapping of the SysML::Ports&Flows::InterfaceBlock.

## General Mappings

ToClassifier\_Init  
Mapping

## Mapping Source

Class

## Mapping Target

ConjugatedPortDefinition

## Owned Mappings

- portConjugation : PortConjugation\_Mapping

## Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
Helper.hasStereotypeApplied(src, 'SysML::Ports&Flows::InterfaceBlock')
```

## Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- ConjugatedPortDefinition::ownedRelationship () : Relationship [0..\*]

```
Set{portConjugation.to}
```

### 7.8.7.3.4 FlowProperty\_Mapping

#### Description

A UML4SysML::Property which satisfies the filter condition of PropertyTypedByClassInterface\_Mapping and to which the SysML v1 stereotype FlowProperty has been applied is mapped as in the general mapping class PropertyTypedByClassInterface\_Mapping but the target feature is always referential and the flow direction specified in the stereotype FlowProperty is considered.

## General Mappings

PropertyTypedByClassInterface\_Mapping

## Mapping Source

Property

## Mapping Target

OccurrenceUsage

## Owned Mappings

(none)

### Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
Helper.hasStereotypeApplied(src, 'SysML::Ports&Flows::FlowProperty')
  and ((not src.type.ocIsUndefined())
    and (src.type.ocIsKindOf(UML::Class)
      or src.type.ocIsKindOf(UML::Interface)))
```

### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- OccurrenceUsage::isComposite () : Boolean [1]  
  
false
- OccurrenceUsage::direction () : FeatureDirectionKind [0..1]

```
Helper.getFlowDirectionKind(Helper.getTagValue(from,
'SysML::Ports&Flows::FlowProperty', 'direction'))
```

#### 7.8.7.3.5 FlowPropertyAttribute\_Mapping

##### Description

A UML4SysML::Property which satisfies the filter condition of Attribute\_Mapping and to which the SysML v1 stereotype FlowProperty has been applied is mapped as in the general mapping class Attribute\_Mapping with consideration of the flow direction specified in the stereotype FlowProperty.

##### General Mappings

Attribute\_Mapping

##### Mapping Source

Property

##### Mapping Target

AttributeUsage

##### Owned Mappings

(none)

### Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
Helper.hasStereotypeApplied(src, 'SysML::Ports&Flows::FlowProperty')
  and (not src.type.ocIsUndefined() and src.type.ocIsKindOf(UML::DataType))
```

### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `AttributeUsage::direction () : FeatureDirectionKind [0..1]`

```
Helper.getFlowDirectionKind (Helper.getTagValue (from,
'SysML::Ports&Flows::FlowProperty', 'direction'))
```

### 7.8.7.3.6 FlowPropertyUntyped\_Mapping

#### Description

A UML4SysML::Property which satisfies the filter condition of PropertyUntyped\_Mapping and to which the SysML v1 stereotype FlowProperty has been applied is mapped as in the general mapping class PropertyUntyped\_Mapping but the target feature is always referential and the flow direction specified in the stereotype FlowProperty is considered.

#### General Mappings

```
Helper.hasStereotypeApplied (src, 'SysML::Ports&Flows::FlowProperty')
and src.type.ocIsUndefined()
and not Helper.hasStereotypeApplied (src.owner,
'SysML::ConstraintBlocks::ConstraintBlock')
```

#### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `ReferenceUsage::isComposite () : Boolean [1]`

```
false
```

- `ReferenceUsage::direction () : FeatureDirectionKind [0..1]`

```
Helper.getFlowDirectionKind (Helper.getTagValue (from,
'SysML::Ports&Flows::FlowProperty', 'direction'))
```

### 7.8.7.3.7 FullPort\_Mapping

#### Description

A SysML::Ports&Flows::FullPort element is mapped to a part usage in SysML v2 with metadata that marks the part usage as a full port. The metadata is defined in the SysML v1 library for SysML v2.

The mapping class FullPortUntyped\_Mapping does the same for full ports that have no type.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
part sysMLv1FullPort : SysMLv1Block {SysMLv1Library::PortData {isFullPort = true;}}
```

#### General Mappings

```
SysML2::AttributeUsage.allInstances()  
->any(m | m.qualifiedName = 'SysMLv1Library::PortData::isFullPort')
```

### 7.8.7.3.15 FullPortUntyped\_Mapping

#### Description

A `SysML::Ports&Flows::FullPort` element is mapped to a part usage in SysML v2 with metadata that marks the part usage as a full port. The metadata is defined in the SysML v1 library for SysML v2.

The mapping class `FullPort_Mapping` does the same for full ports with a type.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
part sysMLv1FullPort {SysMLv1Library::PortData {isFullPort = true;}}
```

#### General Mappings

PortUntyped\_Mapping  
CommonFullPort\_Mapping

#### Mapping Source

Port

#### Mapping Target

PartUsage

#### Owned Mappings

(none)

#### Applicable filters

This mapping applies only if the following (OCL) condition implemented by the operation *filter(src : Element) : Boolean* is verified:

```
src.type.ocliIsUndefined() and  
Helper.hasStereotypeApplied(src, 'SysML::Ports&Flows::FullPort')
```

#### Mapping rules

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

### 7.8.7.3.16 InterfaceBlock\_Mapping

#### Description

A SysML::Ports&Flows::InterfaceBlock element is mapped to a SysML v2 PortDefinition.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
port def SysMLv1InterfaceBlock;
```

```

#### Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- PortDefinition::ownedRelationship () : Relationship [0..\*]

```
self.oclAsType(Block_Mapping).ownedRelationship()  
->including(InterfaceBlockOwningMembership_Mapping.getMapped(from))
```

### 7.8.7.3.17 InterfaceBlockConjugated\_Mapping

#### Description

A SysML::Ports&Flows::~InterfaceBlock element is mapped to a SysML v2 PortDefinition. The SysML v1 constraints ensure that the port definition is compatible with the appropriate port definition, which is the target of the mapping of the original interface block. Instead of the special tilde symbol, the port definition name gets a "c" symbol as a prefix. The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
port def cSysMLv1InterfaceBlock;
```

## General Mappings
